

UNIVERSITY OF CALIFORNIA

Advancing AI at UC Davis

Implementation Plan, Governance Framework, and Recommendations
of the AI Steering Committee

PREPARED BY

UC Davis AI Steering Committee

for the Implementation and Oversight of Artificial Intelligence

SUBMITTED TO

Gary S. May, Chancellor

University of California, Davis

DATE

June 10, 2026

Appendix C: Administrative AI Implementation Plan Grid.....	61

1. Background

The UC Davis AI Steering Committee for the Implementation and Oversight of Artificial Intelligence (AI Steering Committee) was established by Chancellor May in November 2025. The Committee's work built directly on the foundational work of the UC Davis Artificial Intelligence Council's [February 2025 report](#) and the Academic Senate's subsequent [August 2025 response](#).

The Committee was co-chaired by Katheryn Russ, Chair of the Academic Senate and Aisha Jackson, Chief Information and Digital Strategy Executive. Its membership drew from a broad cross-section of the UC Davis community, encompassing faculty, students, staff, and administrators with expertise spanning teaching and learning, research, health, information technology, and campus operations across both the Davis and Sacramento campuses.

The AI Steering Committee was charged with:

1. Developing a comprehensive, actionable plan for implementing the recommendations of the Artificial Intelligence Council, integrating the Senate's feedback, and identifying priorities, timelines, and responsible units.
2. Recommending policies, standards, and procedures to ensure that AI tools are adopted and managed in a manner consistent with UC Davis's ethical, academic, and operational standards.
3. Identifying areas where additional consultation, investment, or policy development is required to support responsible and equitable AI integration.
4. Suggesting structures for ongoing oversight, accountability, and evaluation of campus AI practices.
5. Coordinating with relevant campus offices, governance bodies, and systemwide initiatives to ensure alignment and transparency.

The committee's deliverables, as required by the charge, was the following:

- A comprehensive implementation and governance plan for the two UC Davis campuses' AI activities;
- Proposed policies and procedures for AI evaluation, approval, and ongoing oversight;
- A structure for continuing campus governance of AI beyond the committee's term; and
- Identification of resource needs, infrastructure requirements, and capacity gaps.

As the Steering Committee conducted its work, it recognized that the meaningful adoption of AI requires a shared understanding of why UC Davis is embracing AI and what values should guide implementation. As such, the committee developed a vision statement to provide an institution-wide reference point that speaks across the diversity of UC Davis's academic, research, health and administrative communities. The vision that follows serves as an organizing commitment meant to give the work that follows its coherence and direction.

2. AI Vision Statement

The University of California Davis envisions a future in which artificial intelligence serves as a catalyst for human ingenuity, amplifying discovery, enriching learning, improving the delivery of services, and advancing the health and well-being of the communities we serve. Guided by the [UC Responsible AI Principles](#) and grounded in our land-grant mission, UC Davis will integrate AI thoughtfully and equitably across instruction, research, administration, clinical practice, and outreach so that students, faculty, staff, and patients all share in its benefits.

Our approach rests on a commitment to responsible innovation: embracing the transformative possibilities of AI while safeguarding accuracy, fairness, privacy, transparency, human agency, and mental health. We will build governance structures and support systems that are agile enough to keep pace with rapid technological change yet deliberate enough to ensure that every application of AI on our campus reflects our values.

AI competency is becoming essential to student preparation for the workforce and for responsible citizenship. UC Davis will ensure that every student—undergraduate, graduate, and professional—has the opportunity to develop competency with AI tools appropriate to their discipline, to understand the ethical dimensions of AI use, and to critically evaluate AI-generated outputs. Faculty and teaching assistants will be supported through accessible, discipline-relevant professional development, communities of practice, and hands-on workshops that build confidence in AI-aware pedagogy and assessment design.

Equity stands at the center of this effort. We will proactively address the needs of all students by providing low- or no-cost access to campus-licensed AI tools, expanding workshop offerings across central service units, colleges and professional schools, and inviting students to contribute to policy development. Clear, consistent guidance on academic integrity will help students navigate the evolving expectations of scholarly work in an AI-enabled era.

2.1 Research and Scholarly Discovery

UC Davis aspires to conduct world-leading research both on AI and with the aid of AI—responsibly and ethically. UC Davis scholars and researchers are working to advance AI technology, to understand its social, cultural, and environmental impacts, and to address the ethical and philosophical questions raised by its adoption. Across disciplines from precision medicine and food systems to astrophysics and the creative arts, AI is already accelerating discovery by enabling the analysis of complex datasets, automating experimental workflows, and opening new frontiers for interdisciplinary collaboration. Our vision is to ensure that every researcher who can benefit from AI has reliable access to the computational infrastructure, large language model platforms, and expert support needed to advance their work.

To achieve this, UC Davis will invest in scalable high-performance computing capacity, advocate for systemwide preferred-pricing agreements with AI platform vendors, and expand AggieAI capabilities for common research tasks. We will foster a culture of collaboration by connecting researchers with AI expertise across campus, facilitating multidisciplinary partnerships, and building a visible research portal that makes it easy to find collaborators and resources. At the same time, we will strengthen training in the responsible conduct of AI-enabled research—addressing authorship norms, data handling, bias mitigation, and compliance—so that our scholarly contributions meet the highest standards of integrity.

2.2 Administrative Excellence and Workforce Readiness

AI offers UC Davis the ability to streamline operations, reduce administrative burden, and improve the quality and responsiveness of services for students, patients, faculty, and staff. Our vision is to build a workforce that is confident and capable in using AI tools—from foundational awareness through advanced application—and to pilot AI solutions in areas where they can deliver meaningful efficiency gains without compromising the human judgment and care that define excellent service.

UC Davis will create structured AI competency pathways for staff, expand communities of practice for peer learning, and recognize innovative AI integration through awards and showcases. Through platforms like AggieAI, Gunrock, and Rocky, the university will continue to develop secure, institutionally supported tools tailored to UC Davis needs—while rigorously evaluating build-versus-buy decisions for every use case. Sandbox environments will empower departments to experiment responsibly, and successful pilots will be documented and scaled so that lessons learned benefit the entire institution.

2.3 Clinical Practice and Health Professions Education

As a founding partner of the Coalition for Health AI and a leader in translational research, UC Davis Health is positioned to set national standards for the trustworthy deployment of AI in patient care. Our vision extends from the research bench to the bedside: leveraging AI for disease pattern recognition, diagnostic support, precision medicine, and operational efficiency while rigorously evaluating every tool for bias, safety, accuracy, and equity.

Equally important is preparing the next generation of health professionals to practice effectively alongside AI. UC Davis will invest in understanding how AI tools affect clinical skill development—including the ability to read diagnostic results, conduct physical examinations, and exercise independent clinical reasoning—so that technology augments rather than diminishes professional competence. Research on these questions, grounded in our medical, nursing, and veterinary programs, will inform best practices shared across the institution and the broader academic health community.

2.4 Guiding Commitments

Across all four domains, UC Davis's AI strategy is anchored by shared commitments that reflect our institutional values and the UC Principles of Responsible AI.

Governance and oversight: The AI Oversight Committee, will provide coordinated oversight, connect academic and administrative perspectives, and ensure that decisions about AI tool acquisition and deployment receive appropriate review for risk, privacy, accessibility, and alignment with institutional priorities.

Equity and access: We will work to ensure that the benefits of AI are broadly shared. This means providing equitable access to tools and training for all members of the campus community, attending to the distinct needs of diverse learners and employees, and assessing deployment of AI applications in our operations for potential bias in their impacts.

Privacy and security: UC Davis will maintain rigorous standards for data governance, advancing campus-licensed and institutionally managed AI tools that maximize privacy protections and comply with applicable regulations. Training on data security responsibilities will be integrated into onboarding and professional development for both faculty and staff.

Collaboration and economies of scale: We will advocate for and participate in systemwide coordination through the UC Office of the President and the UC AI Council to achieve efficiencies in computing infrastructure, software licensing, risk assessment frameworks, and training resources that benefit all UC campuses.

Agility and continuous learning: The AI landscape is evolving at an extraordinary pace. UC Davis will maintain governance and support structures that are flexible enough to adapt as technologies, regulations, and best practices change—measuring progress through clear success metrics, sharing lessons across units, and adjusting course as we learn.

By pursuing this vision with intentionality and care, UC Davis will position itself as a national model for the responsible, equitable, and innovative integration of artificial intelligence in service of a great public research university’s mission to teach, discover, heal, and serve.

3. Implementation Plans

3.1 Academic AI Subcommittee

The Academic AI Subcommittee was responsible for submitting strategies for: (1) applying and implementing AI in teaching, learning, and research settings, and (2) educating students and faculty, across both campuses, in alignment with UC Responsible AI Principles. To fulfill its responsibilities, the subcommittee split into two workgroups: Instruction and Research. This section includes each workgroup's proposed strategies, objectives (clear, measurable outcomes establishing the criteria for success), activities (discrete tasks and deliverables to achieve the objectives), who is accountable for advancing the activity, and associated timelines, dependencies, resource requirements, and success metrics.

Instructional Workgroup

Strategy 1: Teaching and Learning

Provide options for students to acquire AI knowledge and competency through the following:

- Ensuring opportunities across disciplines for students to gain knowledge, understanding, and, where practicable, mastery of AI tools as an expected outcome for UC Davis students that is flexible to the evolving nature of these dynamic technologies and their critical importance for the job market after graduation.
- Ensuring that students understand how to critically evaluate, transparently and ethically use, and effectively manage AI tools, including in clinical and health professions education.

The opportunities provided must respect diversity across the disciplines and help students understand the evolving human-AI relationship, especially issues related to data privacy (the regulation of which may differ across countries and US states).

Justification: The proposed strategy was informed by the AI Council's recommendation that students should be "educated on risks and benefits of AI use" (Recommendation 4b). The AI Council also called for surveying access to AI-related courses and training (4c, 4e). In consultations on the AI Council report, the Academic Senate's Graduate Council emphasizes that "AI literacy is a skill that students and postdocs will need to develop to be competitive in their fields and in the job market." The Undergraduate Council asked whether AI literacy should be built into General Education or Program Learning Outcomes. Further, the College of Agriculture and Environmental Sciences (CAES) and Faculty

Executive Committee (FEC) noted that "students will need prior foundational knowledge in order to be prepared to fact-check AI output effectively."

Objectives

1. Training for undergraduate and graduate students on data privacy policies and ethical use of AI tools into Orientation and for existing students
2. Checklists for undergraduate students to verify parameters for acceptable use of AI in their academic activities provided during Orientation (and parallel communication for continuing students)
3. Program-specific checklists or training modules for graduate and professional degree students to verify parameters for acceptable use of AI in their academic activities
4. First Year Seminar courses integrating instruction on AI tools and usage with measurable learning outcomes and assessments
5. List of courses integrating knowledge and understanding of AI tools posted with regular updates for each College and Professional School made available to the campus
6. Central campus website with dashboard and links to available workshops, courses, conferences, and other fora imparting knowledge, mastery or understanding of AI tools or design occurring across IET; CEE; Career Center; and centers in the Colleges, Schools, and Library
7. Events for students to connect with alumni and employers to learn about AI-related developments in the job market and broader workforce.

Activities

1. (Obj 1) Create a list of frequently asked questions and information (or a training module for professional school students) crucial to empowering undergraduate and graduate students to make the best choices to safeguard data privacy and maintain ethical standards when using AI tools.
2. (Obj 2-3) Compile and disseminate as part of Orientation (and parallel communication for existing students) a list of questions that students need to ask to understand what constitutes acceptable use of AI tools in
 - a. a particular course or other scholarly activity.
 - b. experiential learning environments.
3. (Obj 3) Policy development by individual academic units
 - a. Academic units offering graduate and professional degrees compile checklist with either (i) questions to ask in individual courses or research settings to understand or (ii) established criteria for acceptable use of AI in

- their coursework and research. Publish on program website and include in Orientation materials and discussions.
- b. Create and disseminate template language for academic units to create policies for AI use within their undergraduate courses
4. (Obj 4) Issue call for faculty to submit proposals for First Year Seminars integrating instruction in AI tools and usage; use already-established FYS screening and approvals process for First Year Seminars; offer approved courses.
 5. (Obj 5) Colleges and Professional Schools compile and establish a system for continuous update of a list of courses integrating instruction aimed at achieving competency with (understanding and using) AI tools and usage. (See [College of Letters and Science AI page](#) as one example.)
 6. (Obj 6) Assemble links to lists of AI-related course lists and events across campus, curate and establish a central website to post.
 7. (Obj 7) Organize and publicize campus-wide and discipline-specific panels and networking events with alumni and employers for students to learn what AI skills will be most useful to them after graduation.

Accountability

1. (Activity 1) Ad hoc group of campus experts on information and data security—or data security governance committee when established—in partnership with the Office of Information and Educational Technology (IET).
2. (Activity 2) Office of Student Affairs partnering with Office of Undergraduate Education, in consultation with the Academic Senate
3. (Activity 3)
 - a. (graduate and professional programs) Academic units and graduate groups, with template or technical support from the Office of Graduate Studies informed by Graduate Council policy and consultation.
 - b. (undergraduate programs) Office of Undergraduate Education in consultation with the Academic Senate and Student Affairs Office of Student Conduct
4. (Activity 4) Office of Undergraduate Education
5. (Activity 5) Dean’s Office in each College and Professional School
6. (Activity 6) Chief Information and Digital Strategy Executive (CIDSE) and designated support staff in partnership with IET.
7. (Activity 7) Internship and Career Center and academic units in partnership with College, School, and campus Development and Alumni Relations officers.

Timeline and milestones

1. Winter/Spring 2026: Update and confirm university and campus-wide policies for AI use and data privacy, design Orientation materials on AI and data privacy for undergraduate and graduate students.
2. Winter/Spring 2026: Create list of questions that students need to ask to understand what constitutes acceptable use of AI tools in
 - a. a particular course or other scholarly activity.
 - b. experiential learning environments.
3. Spring 2026: Communicate university and campus-wide policies for AI use and data privacy to instructors and current students; (Academic Senate) consider how AI tools and mastery will affect General Education requirements or be integrated in questions asked during program review processes
4. Summer 2026: Publish website with dashboard and lists of available courses, events and resources;
5. Summer, Fall 2026 and continuously thereafter as needed: Communicate available tools through Orientation, email listserves and social media
6. Spring/Summer 2026 and continuously thereafter as needed: Create inaugural First-Year Seminars on the nature and applications of AI tools in scholarly activities
7. Launch 3-5 First-Year Seminars on AI in scholarly activities, varied by disciplinary lens, starting Spring/Summer 2026.
8. Continuous (already started) and to continue for 3 years or longer if necessary: Collect data on the use of AI tools and efficacy across administrative and pedagogy for faculty and learning outcomes for students; continued support for First-Year Seminars; continuing provision of AI tool licenses or tokens; continuing DataLab, CEE, and IET workshops.
9. Immediately and ongoing: DEVAR, College and professional school development officers, and Student Affairs begin strategizing ways to organize and publicize campus-wide and discipline-specific panels and networking events with alumni and employers for students to learn what AI skills will be most useful to them after graduation.

Dependencies

1. Education and training of instructors plus development or revision of course curricula described in Strategy 2.
2. Student access to AI tools described in Strategy 3.

Resource Requirements

Note: Many of these activities already are within the current purview or functions of the following units. Units will specify where net additions to resources are needed.

1. IET
 - a. Staff hours for consultations with DataLab, AI Centers, CEE, and CPE as they create workshops and other supportive resources for instructors.
 - b. Assistance creating training module specific to use of AI by professional school students if requested by professional schools
 - c. Recharge to maintain CIDSE website
2. CEE (UE)
 - a. Staff hours to design facilitate faculty workshops on AI use in pedagogy
 - b. Support the collection of data on AI usage in coursework and the effect on student outcomes
 - c. Recharge to create public-facing video on various ways instructors integrate AI into instruction at UC Davis
3. DataLab (Library)
 - a. Funding for workshops on basic use of AI tools for instructors
 - b. Funding for additional workshops on advanced use of AI tools Funding for necessary equipment or AI tool, software licenses
4. Chief Information and Digital Strategy Executive (CISDE) to monitor and exercise oversight beyond 2 years, ensuring alignment and reporting by responsible units for several years as campus adopts AI into select academic activities. Staff support for CISDE to assemble and maintain information for AI Resources website described in Activity 7.
5. Student Affairs
 - a. Staff hours and materials to design and integrate education about responsible use of AI and protection of data privacy into Orientation
 - b. Staff hours to participate in design and distribution of resources for students described in Activities.
6. Career Center
 - a. Staff hours and materials in support of panels and networking events with alumni and employers for students to learn what AI skills will be most useful to them after graduation.
7. DEVAR (College/School and campus)
 - a. Staff hours to facilitate connection between academic programs and alumni in support of discipline-specific student-alumni events

- b. Support for fundraising for centers that help increase access to AI tools and educational experiences

Success metrics (indicators by which progress and outcomes will be evaluated)

1. Decreasing rate of growth academic integrity referrals to the Student Conduct Office based on student's improper use of AI
2. Surveys to identify increased confidence among students in the efficacy and the proper use of AI tools in logistical and academic spaces.
3. Public-facing video for students and the public about the many ways faculty are integrating AI into the curriculum
4. Engagement with alumni related to AI and workforce development or support for AI tools and educational experiences;
5. Evidence of student experience of smoother launch after graduation (survey)

Figure 1: Illustrating Implementation of Strategy 1 across Stages of the Student Journey

Committee Note: Student Mental Health and AI Related Risk

The committee wants to draw attention to an additional area for consideration by student groups, instructors and offices involved in the provision of mental health, co-curricular,

special academic programs, and advising services to students (including the Schools and Colleges, Student Affairs, the Office of Undergraduate Education, and the Office of Graduate Studies): the mental health implications of harmful use among students.

There are a growing set of concerns associated with heavy or habituated reliance on AI tools, including increased social isolation, diminished capacity for authentic human connection, and the erosion of socio-affective skills that students develop through peer interaction, collaborative learning, and engagement with faculty and advisors. These risks are distinct from academic integrity or access concerns, and they may be felt most acutely by students who are already navigating loneliness, transition stress, or limited social networks.

The Steering Committee encourages instructors and offices that offer student support to consider how existing support structures might be engaged to monitor these risks and develop proactive programming. This could include public-facing guidance to help students reflect on their AI use patterns, professional development for student affairs staff to recognize and respond to AI-related wellbeing concerns, and integration of these themes into orientation programming already planned in partnership with Undergraduate Education. The Office of Undergraduate Education and the Office of Graduate Studies also can serve as conduits of information to the Schools and Colleges and to instructors to raise awareness of these risks and provide resources to units as they integrate AI into their programs.

Strategy 2: Faculty Development and Support

For instructors of record and Teaching Assistants who wish to integrate AI tools into classroom and disciplinary learning, invest in accessible, discipline- specific and discipline-relevant professional development that builds faculty and teaching assistant confidence in developing AI-aware pedagogy. This may include integrating AI into pedagogy, assessment design, and student support, while preserving appropriate data privacy, instructional autonomy, and academic freedom.

Justification: The proposed strategy was informed by the AI Council's recommendation that "trainings required for faculty could be updated to include information about risks of AI use, and where resources are lacking for faculty who wish to integrate AI into instruction" (Recommendation 4b) and the identification of "resources to support instructors in evaluating the effectiveness, accuracy, and integrity of assessments" (4g). In consultations on the AI Council report, Undergraduate Council expressed concern "regarding the very wide range of faculty engagement with and knowledge of AI tools" and noted that "assessing faculty needs and rapidly improving literacy and capacity is both critical and urgent." The Divisional Senate response observed that "there is no 'go-to' place

for people to identify resources if they want to start using AI tools in teaching and research." College of Letters and Science (CLAS) FEC emphasized that "faculty would like to see more guidelines and policy around best practices, appropriate use, and disclosure of use of AI."

Objectives

1. Knowledge and mastery of AI tools (responsible use and management) in classroom settings by instructors of record and Teaching Assistants, including an understanding of the nature and limits of AI use “detectors” and other aids
2. Knowledge and tools for instructors of record and Teaching Assistants to maintain student and instructor data privacy
3. Course policies that respect the diversity of AI use across disciplines
4. Variety of courses (including new First-Year Seminars) providing instruction in use of AI tools relevant for academic success and success in the workforce after graduation

Activities

1. (Obj 1 and 2) Create supportive, multi-layered resources to provide education and training for instructors who wish to integrate or consider integrating AI into their courses or create new ones doing so, and also to achieve necessary compliance requirements for data security and licensing, including
 - a. Communities of Practice where instructors can meet repeatedly over a long period of time to discuss adoption and outcomes of new AI-related techniques and curriculum
 - b. Workshops on the availability and use of AI tools which
 - i. Are offered frequently and at a variety of times and formats (one-time short meetings, half-day retreats, short series of shorter meetings)
 - ii. Include of opportunities where faculty can talk extensively in small groups about ideas and what has or hasn’t worked in their classes
 - iii. Contain key information about data privacy and campus-licensed AI tools
 - iv. Have output from faculty discussions curated to create a “cache” of assignment designs and pedagogical approaches made available to instructors
 - c. Individual consultations with instructors interested in integrating AI into their curricula or pedagogy

- d. Disseminate template language for syllabi and communications with students to aid instructors wishing to communicate more clearly about acceptable AI use
2. (Obj 2) Integration of training for compliance requirements *into existing instructor and employee training modules* on cybersecurity, ethics, etc.
3. (Obj 3) Review and update where appropriate General Education requirements and Minimum Elements; consider whether questions or data related to AI integration and student experience might be integrated into program reviews
4. (Obj 4) Preparation of new courses and revision of existing courses where appropriate by faculty in partnership with degree program chairs and program advising staff, and likely with inquiries to Deans Office and Senate Office staff who support committees who handle course approvals, as well as the committee and staff who process reviews and approval of First-Year Seminars. (This may require review and revision of some degree requirements.)
5. (Obj 4) Identify and publicize appropriate IT support or point of contact for faculty who wish to build tools or ad-ons to help an instructor teach a specific topic or skill.

Accountability

1. (Activity 1)
 - a. UE (CEE, Writing Center) will lead these efforts and may partner with DataLab (Library), IET, and centers in Colleges and Professional Schools.
 - b. DataLab may provide support for workshops in basic use and advanced use of AI tools.
2. (Activity 2) IET, UCOP
3. (Activity 3) Academic Senate Undergraduate Council and Graduate Council, with staff support from Senate Office
4. (Activity 4) UE to provide template language; individual instructors of record to integrate language into syllabi and communications with their students; academic units who may wish to support instructors of record by providing general language or best practices on AI use for courses within their discipline
5. (Activity 5) Entity within the office of the CIDSE, who may catalogue requests to prioritize future resource requests or refer faculty to decentralized resources; clear criteria and protocols for registering records of invention where applicable via the CIEDO.

Timeline and milestones

1. Spring/Summer 2026: Design of workshops to support faculty development in use and integration of AI tools, including hands-on instruction in computer lab settings.
2. Spring/Summer 2026: Designate staff available in CEE or other units available for one-on-one consultations with faculty redesigning their curriculum or pedagogy to integrate AI into their course
3. Summer 2026: IET/UCOP integrate training for compliance requirements into existing instructor training modules on cybersecurity, ethics, etc.
4. Summer 2026: Academic Senate planning to support process for redesign or issuance of interim guidance on General Education requirements and Minimum Elements related to Writing Experience and other Literacies if appropriate; consider whether questions or data related to AI integration and student experience might be integrated into program reviews
5. Fall 2026: Create Communities of Practice to collect/cache and enhance best practice strategies
6. Fall 2026-Spring 2027: Academic Senate review and update of General Education Literacies and program review criteria to accommodate new AI-related pedagogical and curricular approaches (necessities) where appropriate; where identified by faculty as appropriate, preparation and submission of proposals for new courses or changes to existing courses and programs involving integration of AI tools or knowledge.

Dependencies

1. Data security policies and governance structure must be in place to create materials to train faculty in any compliance issues specific to AI and data privacy
2. Most faculty will need information about compliance and support to master use and management of AI tools prior to developing and delivering new or revised course curricula to integrate them.
3. The Committee on Courses of Instruction may need to consider how they wish to review proposals for new courses or to change existing courses.

Resource Requests

1. Staff hours, supplies, and room fees:
 - a. Workshops on the use and efficacy of AI tools across various areas of coursework
 - b. Assistance creating training module specific to use of AI by professional school students if requested by professional schools

- c. Recharge to maintain CIDSE website
- 2. CEE (UE)
 - a. Staff hours to design facilitate faculty workshops on AI use in pedagogy
 - b. Staff hours to support discipline-focused Communities of Practice on AI use in pedagogy where requested
- 3. DataLab (Library)
 - a. Funding for additional workshops on basic and more advanced usage of AI tools in discipline-specific contexts
 - b. Funding for necessary equipment or AI tools, software licenses, event logistics (website maintenance, room reservations, RSVP coordination, etc.)
- 4. Center for Artificial Intelligence in Engineering and Center for Artificial Intelligence and Experimental Futures
 - a. Faculty time assisting in development of workshops in advanced usage of AI tools that can be adapted for discipline-specific instruction and research

Success metrics

1. Participation by faculty in workshops and communities of practice centered around use and management of AI tools (registrations and attendance)
2. An expansion of a “Best Practice” cache of AI use in the pedagogy across academic disciplines (volume)
3. Expanded variety of courses with AI knowledge or mastery integrated explicitly into course descriptions (measured via word search of course titles and descriptions, but also by survey of departments to detect existing courses that are integrating new AI-based tools or understanding but not to a degree that requires re-approval)
4. Evidence of wider adoption of AI tools by instructors of record in *existing* courses (survey)
5. Lower incidence of referrals to Student Conduct Office for suspected misuse of AI (count of Center for Academic Integrity case logs)

Strategy 3: Student-Centered AI Integration

Center student voices and experiences in AI policy development, with particular attention to equitable access for international, multilingual, and under-resourced learners, and proactive support for students navigating AI-related academic integrity expectations and data privacy.

Justification: The proposed strategy was informed by consultations with the Academic Senate and the campus community. In the consultations, the School of Education (SOE) FEC noted that the AI Council report "focuses primarily on instructors and their needs" and called for "a more student-centered approach that explicitly considers how students are

using these technologies and how they are understanding and navigating ethical dilemmas." Undergraduate Council observed that "student perspectives are currently underrepresented on the AI Council" and asked "what assurances can be made that [all] students, especially international, multilingual, and low-income learners, will have equitable access to AI tools, training, and protections against wrongful or misguided accusations."

Objectives

1. Access for students to high-quality AI tools that safeguard data privacy;
2. Awareness across campus of student needs and mastery with respect to use of AI tools and access.
3. Access for students to workshops to learn basic use of AI tools offered both by central campus unit and within Colleges and professional schools

Activities

1. (Obj 1) With consultation from students, campus licensing of AI tools for student use including possible interface with Canvas
2. (Obj 1) Provision of access to AI tools to students at low cost
3. (Obj 2) Continuous monitoring of student AI access to, familiarity with and mastery of AI tools via
 - a. campus-wide surveys
 - b. (subject to Academic Senate adoption) regular program review processes.
 - c. UCUES and UCGSES, exit surveys for professional school students
4. (Obj 3) Creation and scheduling of workshops available to students to learn basic use of AI tools.

Accountability

1. (Activity 1) IET for licensing and curation of AI tools appropriate for student academic use; IET and College IT executives for vetting of new tools piloted for introduction by individual instructors; ASUCD for consultation on latest tools and student needs;
2. (Activity 2) IET for curating and dissemination of access at low cost
3. (Activity 3) UE for regular surveys of student experience and outcomes with respect to AI access and mastery; Academic Senate Undergraduate Instruction and Program Review Committee and Graduate Council Program Review Committee for integration of questions related to student experience with

respect to AI access and Mastery into program reviews; UCOP for topline questions in UCUES and UCGSES.

4. (Activity 4) IET, DataLab (Library), IT units or AI Centers in Colleges and professional schools where capacity exists

Required resources

1. IET
 - a. Staff hours: Continued innovation of the use of AI tools (E.g Rocky AI in Canvas)
 - b. AI tool license and token fees
 - c. Staff hours: Consult with DataLab (Library) and IT units or AI Centers in Colleges and professional schools on design of workshops for students to learn basic use of AI tools
2. DataLab (Library) and IT units or AI Centers in Colleges and professional schools
 - a. Staff hours and funding to design and offer workshops for students to learn basic use of AI tools (CLAS currently is funding this but at a limited frequency and only through AY 2026-27.)
 - b. Equipment: Suitable for offering workshops for students to learn basic use of workhorse AI tools within broad disciplinary contexts (life sciences, physical sciences, social sciences, arts and humanities)
3. CEE (UE)
 - a. Support the collection of data on AI usage in coursework and the effect on student outcomes

Timelines and milestones

1. (Fall 2026, on-going): Provide students low (or no) cost access to AI Tools that are commensurate with the tools used in industry
2. (On-going): Identify undergraduate students through conversations with ASUCD and work with Student Affairs to identify students in Academic Resource Centers and formal student clubs to participate in AI planning discussions.
3. (Spring 2026 and on-going): Build a cache of courses focused on training on AI Tools and communicate these courses to students, advisors and faculty through the registrar's website, academic majors websites, and the course catalog. Socialize courses and track student registration in these courses.
4. Build AI adoption questions into survey tools, such as UCUES and post-graduation First Destination reports

5. (Starting with Cluster 4 Program Review): Subject to Senate review and approval, revise the Program Review to query majors on their use of AI tools in course building and planning, and in pedagogy in courses across the major.

Dependencies

1. The AI Council building lines of communication with ASUCD, Academic Resource Centers and other formalized student clubs (Student Affairs).
2. Intentional conversations with academic units, Undergraduate Education (Special Academic Programs/ELWR/UDC), and Student Affairs (TRIO programs) about the strategy to create and integrate of AI Tools into training modules and coursework
3. Funding and IET support directed to Student Affairs Resource Centers in order to impact issues around accessibility and equity.

Resource Requirements

1. Funding the CIDSE, or like-minded central entity, focused on strategically aligning resources to support accessibility and equity.
2. Funding to support the creation and building of new courses focused on the use of AI Tools.
3. Funding to support DataLab, AI Centers in the Colleges and Schools, and spaces such as the Writing Center to build and deliver workshops on the use of AI Tools in coursework and the workforce. (CLAS is funding a limited number of all-day Saturday workshops on basic use of AI tools designed for undergraduate students by DataLab, but is not likely to be able to continue to do so after AY 2026-27—and a greater number of offerings may be welcome even during AY 2026-27 than current funding can support.)

Success metrics

1. Participation rates for AI training (# students)
2. Increased use of campus-licensed AI tools (internal metrics on user engagements with Rocky AI in Canvas by students or requests for tokens by students to use other Aggie AI tools)
3. Increased reported usage (frequency, breadth of tasks) of AI tools (survey)

Strategy 4: Academic Integrity in the AI Era

1. General guidance: Develop clear, consistent, and widely communicated general guidance for instructors and students on appropriate AI use in academic work, supported by accessible resources and restorative approaches to address misuse and protect privacy.

2. Best practices and proactive measures: Publish template syllabus language, AI disclosure norms, and assessment redesign guides to strengthen academic integrity without overreliance on AI detection tools; ensure fair, consistent practices and due process pathways while honoring the pedagogical and curricular diversity of our courses and instructors.

Justification 1: The proposed strategy was informed by the AI Council's recommendation to work with the Office for Student Support and Judicial Affairs on student education (Recommendation 4b). The SOE FEC noted that "the 'instruction section' lacks attention to issues of academic dishonesty" and suggested this "may require a separate committee made up of experts in AI, higher-ed pedagogy, and (in)equity in student disciplinary action." Undergraduate Council asked "how will the proposed structures address growing concerns over AI-related academic misconduct" and whether UC Davis "should consider alternative models such as those used at other UC campuses with dedicated Academic Integrity Offices." Graduate Council advised that existing OSSJA resources on "AI usage, misconduct, and strategies for effective conversations with students about AI should be broadly shared and made available to all faculty."

Justification 2: The AI Council highlighted instructional vetting and assessment integrity when AI is permitted (Council §3, Rec 4.g); Senate requested practical mechanisms to manage AI-related misconduct and consistent support for instructors and OSSJA (Senate: UGC pp.14–15; GC p.13). Also see related recommendations in the systemwide Senate Workgroup on Artificial Intelligence Report.

Objectives

1. Academic integrity policies and protocols that
 - a. respect the diversity of AI use across disciplines
 - b. are consistent between instructional support units (in UE and IET) and student conduct processes (in Student Affairs)
 - c. develop non-punitive educational responses for first-time AI misuse
2. Shared faculty resources for AI-related integrity in the classroom
3. Clear communication to students about the criteria for acceptable use of AI tools in coursework
4. Ethical, accurate practices for detection of violations involving misuse of AI
5. Opportunities (for instructors who wish) to administer proctored, in-person exams for online courses in partnership with national consortia or services, California community colleges, and education abroad partners.

Activities

1. (Obj 1) Draft local implementation plan for systemwide Interim Policy on Student Conduct and Discipline & Appendix H (Interim PACAOS 100) and finalization following dissemination for campus review during feedback period and review by Academic Senate (via Request for Consultations) and Provost Leadership Council.
2. Integrate any needed guidance due to changes to PACAOS 100 and the local implementation plan into Orientation materials for incoming undergraduate and graduate students.
3. (Obj 2) Design and disseminate educational materials for faculty who wish to understand academic integrity protocols on campus (via the Office of Student Conduct and Integrity) and to promote academic integrity in their courses with respect to AI use including non-punitive options.
4. (Obj 3) Consolidate and continuously update template language suitable for syllabi based on current availability of AI tools and campus policies; disseminate to instructors of record.
5. (Obj 4) Establish best practices for selecting tools used to detect violations of academic integrity involving misuse of AI.
6. (Obj 5) Establish opportunities and protocols such as the new UC Testing Center Pilot or community library proctoring for instructors teaching online courses who wish to use proctored, in-person final exams to ensure mastery.

Accountability

1. (Activity 1) Student Affairs will draft and circulate for review by campus stakeholders
2. (Activity 2) Office of Student Conduct and Integrity in partnership with UE and the Academic Senate.
3. (Activity 3) CEE (UE) in consultation with IET and the Academic Senate
4. (Activity 4) UE to provide template language in partnership with IET and CIDSE and in consultation with the Academic Senate; individual instructors of record with purview to integrate language into syllabi and communications with their students; academic units who may wish to support instructors of record by recommending general language or best practices on AI use for courses within their discipline
5. (Activity 5) Office of Student Conduct and Integrity in consultation with UE, the Academic Senate, and the Council of Associate Deans.
6. (Activity 6) UC Davis Provost designee, Systemwide Provost

Required Resources

1. (Obj 1) This resource will include faculty and staff (Student Affairs) and a time commitment to draft local implementation plan for systemwide Interim Policy on Student Conduct and Discipline & Appendix H (Interim PACAOS 100) and, upon Senate approval, integrate into the orientation schedule for incoming students.
2. (Obj 2) Again, this objective involves faculty and staff (Office of Student Conduct and Integrity) formulating a plan and a set of training modules to help faculty promote academic integrity guidelines for their students.
3. (Obj 3) A time commitment is required on the part of various units to create and continuously and, upon the approval of the Senate, update and disseminate template syllabi and campus AI policy language.
4. (Obj 4) Funding to support the purchase of software to help detect the inappropriate by students
5. (Obj 5) Where appropriate, funding to support both campus-based and off-campus testing centers for proctored finals of on-line courses.

Timelines and milestones

1. Winter/Spring 2026: Complete draft of local implementation plan for Interim PACAOS 100 and disseminate for campus feedback including through the Academic Senate's RFC process and the Provost's Leadership Council.
2. Summer 2026: Update Orientation materials related to academic integrity based on revisions to PACAOS 100 and finalized local implementation plan.
3. Summer/Fall 2026: Design and disseminate educational materials related to conduct policies and processes for faculty seeking to promote academic integrity in their courses with respect to AI use.
4. Academic Year 2026-27: Conduct any necessary (additional) background research to establish best practices for selecting tools used to detect violations of academic integrity involving misuse of AI.
5. Ongoing: Continuous updating of templates and education materials for faculty and students on an annual basis. Establishment and expansion of off-campus in-person, proctored testing opportunities for online courses.

Dependencies

1. Some aspects may require prior update of data security policies and governance infrastructure

Success metrics

1. Reduced growth rate in referrals to the Office of Student Conduct and Integrity for suspected misuse of AI.
2. Reduced overload of staff resources in the Office of Student Conduct and Integrity
3. Fewer delays in student degree completion due to backlogs in processing of student conduct referrals
4. Reduced workload for instructors related to reporting and response to violation of academic integrity related to misuse of AI
5. Reduced anxiety among students related to uncertainty related to appropriate use of AI in academic settings

Strategy 5: Innovation in Health Professions Education

Support the integration of AI tools in clinical training, simulation, and competency development across medical, nursing, veterinary, and allied health programs to prepare graduates for AI-augmented practice environments (in addition to Objectives already covered by Strategies 1-4).

Justification: The AI Council's report noted that "in medicine and veterinary medicine, AI tools can be used to help train students to look for clinical patterns" (Section 4.2.2) and highlighted UC Davis Health's role in the Coalition for Health AI (Section 4.1). The School of Medicine FEC's response indicated the need for "considerably more detail" on clinical practice applications (Comment 19), underscoring the opportunity for expanded attention to health professions education.

Objectives

- Understanding the impact of AI tools on skill-building during professional school training, particularly with regard to
 - potential loss of human ability to read slides and other lab results, conduct physical exams, and transcribe personal notes during office exams and other activities
 - Intrinsic motivation to learn the foundations of medicine.

Activities

- (Obj 1) Promote research on impact of use of AI tools on skill-building during professional school training, particularly with regard to
 - potential loss of human ability to read slides and other lab results, conduct physical exams, and transcribe personal notes during office exams and other activities

- Intrinsic motivation to learn the foundations of medicine

Accountability and Timeline

- School of Veterinary Medicine, School of Medicine, School of Nursing in partnership with CPE from Summer 2026 and ongoing

Resource Requirements

- Internal

Success metrics

1. Publications in peer-reviewed journals on impacts and best-practices for integration of AI into training of health professionals
2. Internal seminars to promulgate awareness of impacts and research-based best-practices for integration of AI into training of health professionals

Research Workgroup

Strategy 1: Assure Access to Compute Resources and LLM Tools

Objectives

- Identify current compute resource needs for AI enablement of research projects generally and for research on AI specifically, anticipate future demand, and ensure campus budget and planning decisions take these into account.
- Facilitate cost-effective access for researchers to LLM tools from outside vendors (eg Open AI, Anthropic etc.) with contractual terms that meet security, privacy, and ethical requirements, and provide stable and predictable cost structures for grant-funded research.
- Explore augmentation of AggieAI for common research tasks, in addition to expansion and validation of its use in research administration and compliance.

Activities

1. Complete action on START recommendations on high-performance computing, research data security and file storage, campus network infrastructure to assure basic infrastructure on campus is fit for purpose.
2. Charge Strategic Administration of Research Computing (STARC) committee with ongoing evaluation of compute needs for AI-related research needs and assessment of the available options (on prem GPU cluster, cloud or other) to meet needs.
3. Advocate with UCOP to negotiate preferred-pricing agreements for access to LLM platforms that include researcher's preferred choices of tools and meet privacy and security requirements. Alternatively, explore similar UC Davis agreements.

Accountability: CIDSE, HPC@UCD, IET, OR, Provost, STARC committee, UCDH IT

- Activity 1: Provost decides whether to approve to START Research Computing Work Group recommendations 4 (research security and data storage) and 5 (campus network and security).
- Activity 2: Add to STARC committee charge (beyond current START proposals). This is already incorporated into the STARC Oversight Committee Charge
- Activity 3: Vice Chancellor for Research; Vice Chancellor for Finance, Operations, and Administration; CIDSE/CIO; Academic Senate; EVC; Chancellor should all advocate with UCOP, with CIDSE coordinating advocacy with UCOP and campus-level licensing. Vice Chancellor for Research should lead advocacy with UCOP for licensing of platforms of particular importance for Research and alert CIDSE of these needs for possible (2-)campus-level agreements. This requires an executive

decision on whether there is a centrally funded campus resource or if departments/PIs will be responsible for purchasing their own licenses from local resources, including sponsored projects.

Timeline and milestones

- See START recommendations. Immediate implementation and ongoing.
- Immediate advocacy with UCOP to expedite procurement process with other vendors (as Anthropic)

Dependencies: Consultation process and approval by provost, budget availability, UCOP action on license negotiations

Resource Requirements: See START recommendations for immediate requirements (requests for funding included in recommendations; costs will need to be updated). In addition to resource requests in the START recommendations, resource needs for LLM tools are evolving. Some funds likely can be recovered from sponsored projects, but future resources must be part of campus budget planning, and should be included in budget requests for FY27 and beyond.

Success metrics: HPC capacity relative to demand; faculty recruitment/retention; ability to get grants, compute costs (including all costs to allow valid comparison); environmental impact (need to find credible metrics for this).

Strategy 2: Facilitate Collaboration and Access to AI Expertise

Objective: UC Davis researchers can easily and efficiently connect with:

- Collaborators for research on AI
- AI experts to enable research using AI or understanding AI/AI-enabled tools as applied to their research/scholarship/creative activity

Activities

1. Convene research leadership from colleges and schools to discuss approaches
2. AI research portal on Research website
3. Evaluate, in collaboration with deans, need for organized unit to coordinate multidisciplinary research engagement with AI

Accountability: VCR, Deans, ADRs

- Activity 1: Vice Chancellor for Research or Associate Vice Chancellor for Research convenes Associate Deans for Research of all Colleges and Schools (or their designees, including any they wish to include in addition to this list and Center Directors) to discuss approaches.
- Activity 2: Vice Chancellor for Research should collaborate with CIDSE to create website and tie into any central UC Davis web resources (expecting a central hub based on other subcommittee recommendations).
- Activity 3: Office of Research should be charged to coordinate and organize multidisciplinary research engagement.

Timeline and milestones: Research Coordinating Council (RCC; Associate Deans for Research) meetings in Spring Quarter and Summer. Working group to formulate plans.

Dependencies: Broad buy-in for approach

Resource Requirements: Seed funding or other resources to incentivize multi-dimensional researcher engagement (initial estimate \$250k/yr as pilot of this concept). Base support for center/institute if there is consensus that this is needed.

Success metrics: Increased grant funding, number of researchers engaged, industry partnerships, philanthropic support.

Strategy 3: Assure Responsible Use of AI in Research

Objective: Ensure ethical and responsible use of AI in research, meeting the expectations of the field of research and compliance with requirements.

Activities:

1. Ensure AI is specifically addressed in responsible conduct of research, human subjects research training etc. Update available training accordingly.
2. Encourage departments/centers to discuss and clarify expectations for responsible AI use in the academic field, including authoring (grants, publications) and reviewing, and in handling research data.
3. Facilitate campuswide workshops on these issues.
4. Revise instructions for internal grant applicants and reviewers to be clear on allowable use of AI.

Accountability: VCR/OR, deans, center directors, chairs, academic senate

- Activity 1: Office of Research leadership and staff should review and update available training material and modules to ensure AI is specifically addressed.
- Activity 2
 - Office of Research leadership should lead outreach to departments and centers to encourage discussion and clarification of expectations for responsible AI use in research and creative activities. Academic Senate Leadership may wish to help support these efforts.
 - Office of Research, in consultation with the Academic Senate, should create or compile templates or other supportive materials to support department and center heads who wish to lead such discussions or provide example language for faculty to consider.
- Activity 3: Office of Research should create and provide workshops on these issues.
- Activity 4: Office of Research in consultation with the CITSO Associate Deans of Research and the Academic Senate.

Timeline and milestones:

- Review current training offerings by summer 2026, introduce revised online training portfolio if necessary by end of 2026 calendar year.
- Discussion at RCC in spring quarter
- Revise grant guidelines by end of 2026 calendar year

Dependencies: Few, perhaps availability of updated online training resources.

Resource Requirements: Minimal, other than potential cost for revised/additional online training modules.

Success metrics: Assessment of awareness and level of comfort with addressing compliance/ethical issues with AI in research.

Committee Note: Environmental Sustainability

The committee encourages the Office of Research to consider environmental impact mitigation as an explicit criterion in STARC's evaluation of AI-related compute investments.

The environmental costs of AI infrastructure are substantial and growing. The International Energy Agency estimates that global data center electricity consumption could nearly double to 945 terawatt-hours by 2030, with AI identified as the primary driver of that growth. Deployment of AI servers in the United States alone is projected to generate annual water and carbon footprints of significant scale through 2030, with costs that are not evenly distributed across communities or regions. Research universities, as major

operators of high-performance computing infrastructure, both contribute to these impacts and are well-positioned to model more sustainable practices.

The Steering Committee encourages STARC, in partnership with the Office of Research, to incorporate environmental sustainability as a standing evaluation criterion alongside cost, performance, and security when assessing compute options.

3.2 Administrative AI Subcommittee

The Administrative AI Subcommittee was responsible for submitting strategies for: (1) applying and implementing AI in administrative settings, and (2) educating staff across both campuses, in alignment with UC Responsible AI Principles. This section includes the subcommittee's proposed strategies, objectives (clear, measurable outcomes establishing the criteria for success), activities (discrete tasks and deliverables to achieve the objectives), who is accountable for advancing the activity, and associated timelines, dependencies, resource requirements, and success metrics.

Strategy 1: Workforce Readiness

Provide role-appropriate training for staff across all divisions to understand AI capabilities, limitations, and responsible use, enabling employees to leverage AI tools effectively while managing associated risks.

Objective 1: Increase communication pathways and outreach of existing AI training, guidance, and toolkits across campus.

Activities

- Curate an inventory of AI training offerings available to UC Davis staff (i.e. Coursera, Skillsoft, in-person offerings (see [table in Appendix A](#))
- Develop a campus wide communication strategy increasing AI training visibility
- Identify AI champions within colleges, departments, and administrative units to disseminate AI campus-based offerings to their units
- Embed AI modules into existing staff onboarding programs (new faculty orientation, new employee welcome)
- Host recurring AI information sessions by common functions of interest, i.e. 'AI For Administrative Efficiency' or 'AI as a Brainstorming Partner'

Timeline: These activities can be front-loaded by existing units and talent at UC Davis. Reasonably, these activities could launch in 30-90 days

Dependencies

- Continued access to enterprise training platforms (i.e. Coursera, Skillsoft)
- Data from the learning management system for tracking completion
- Cross campus participation and collaboration

Resource Requirements: Cross functional support and time and effort will be needed from areas such as IET, Learning and Organizational Development, Strategic Communications, and Continuing and Professional Education.

Success Metrics: A baseline will need to be determined for the metrics below.

- Increased percentage of staff who report awareness of AI training offerings
- Increased percentage of staff who participate in AI training offerings
- Number of AI information sessions offered per year
- Percent of new employees completing AI onboarding content or engaging with AI training in their first year
- Number of communication channels leveraged to increase AI visibility

Objective 2: Enhance offerings of progressive AI training for staff with more advanced knowledge and skills.

Activities

- Increase awareness of existing Skillsoft and Coursera offerings for staff with intermediate to advanced knowledge of artificial intelligence- [AI Apprentice to AI Architect](#) and [Artificial Intelligence \(AI\)](#).
- Evaluate the quality of existing training program offerings to ensure relevance and upskilling of staff potential
- Develop structured AI competency pathways specific to UC Davis staff, i.e. (prerequisite: AI Essentials at UC Davis, intermediate: AI Apprentice to AI Architect and advanced: Demo AI mastery to peers)
- Fund a staff scholarship program (i.e. through Staff Assembly) for advanced AI users to receive training from national experts.
- Establish a ‘train the trainer’ program for advanced AI users.

Timeline

- Months 1-2:
 - Evaluate and assess existing training offerings
 - Fund staff scholarship program
 - Develop curriculum for train the trainer program
- Month 2:
 - Develop AI competency pathways
- Month 3:
 - Launch train the trainer program
 - Launch staff scholarships

Dependencies

- Continued access to enterprise training platforms (i.e. Coursera, Skillsoft)
- Cross campus participation and collaboration

- Evaluation criteria

Resource Requirements

- Funding for staff scholarships
- Funding for curriculum development for a train the trainer program
- Cross functional support and time and effort will be needed from areas such as IET, Learning and Organizational Development, Strategic Communications, Continuing and Professional Education, and Staff Assembly.
- Time and effort of a group of advanced AI users who can vet quality of existing staff trainings

Success Metrics

- Increased percentage of staff who report awareness of AI trainings that go beyond the basics
- Completion of an overall assessment of the quality of trainings offered for staff
- Completion of a standardized AI competency pathway
- Number of staff scholarships granted
- Number of participants in train the trainer program

Objective 3: Develop cross campus opportunities to receive hands-on learning on AI use.

Activities

- Launch an AI community of practice sponsored by IET in consultation with Learning and Organization Development.
- Identify and create opportunities for interdepartmental sharing of on the job applications of AI use
- Examples: ‘sandbox sharing’ peer to peer instruction and sharing of ideas at department meetings, Student Affairs Stay Day, etc.

Timeline

- Month 1: Identify framework and scope of community of practice and interdepartmental sharing opportunities, key leads, and convener
- Month 2: Launch AI community of practice and interdepartmental sharing framework

Dependencies: Cross campus participation and collaboration

Resource Requirements

- Cross functional support and time and effort will be needed from areas such as IET and Learning and Organizational Development.
- Time and effort of a lead to convene communities of practice and on the job AI use practice

Success Metrics

- Number of participants in community of practice
- Number of departments participating in interdepartmental sharing opportunities

Objective 4: Cultivate staff recognition opportunities for promising AI integration.

Activities

- Expand existing staff professional development events (i.e. Continuous Improvement Showcase, Adman conference) to showcase AI integration through lightning talks, demo opportunities, etc.
- Highlight staff AI innovators in Dateline, i.e. featured “AI in Practice” profiles
- Seed grants or mini funding awards for promising AI integration ideas (i.e. Staff Assembly Citations of Excellence program offers an Innovation Award, encourage nominations for AI use in the workplace)

Timeline: These activities can be front-loaded by existing units and talent at UC Davis. Reasonably, these activities could launch in 30-90 days.

Dependencies:

- Cross campus participation and collaboration
- On campus conferences and events continuing to be made available to staff

Resource Requirements

- Funding for seed grants and awards
- Funding to sustain and expand professional development events
- Cross functional support and time and effort will be needed from the Office of Business Transformation, Human Resources, Strategic Communications, and Staff Assembly.

Success Metrics

- Number of seed grants and awards funded
- Number of AI related sessions offered and embedded in existing conferences
- Engagement rate of “AI in Practice: profiles (I.e. open rates, profile submissions)

Objective 5: Ensure awareness of responsible AI use and campus cybersecurity policy.

Activities

- Increase completion rate for AI Essentials at UC Davis in the Learning Management System
- Embed responsible AI usage reminders in approved AI tools and platforms
- Incorporate regular AI cybersecurity communications as part of overall AI campaign

Dependencies

- Continued access to AI Essentials training
- Data from the learning management system for tracking completion
- Cross campus participation and collaboration

Resource Requirements

- Cross functional support and time and effort from Strategic Communications, Learning and Organization Development, and IT.
- Inventory of existing AI tools and feasibility of incorporating AI usage reminders

Success Metrics

Background: Currently, 292 employees have completed AI Essentials and 153 are in progress with a rating of 4.5/5 stars.

- At least 25% of career staff will have completed AI Essentials at UC Davis
- Number of platforms and tools that incorporate usage reminders
- Engagement rate with AI cybersecurity communications (i.e. open rates)

Strategy 2: Enhance Administrative Services through Targeted AI Implementation

Identify and pilot AI applications that meaningfully improve service delivery, operational efficiency, and constituent experience for students, patients, faculty, and staff—scaling successful initiatives and sharing lessons learned across units.

Objective 1: Identify and prioritize administrative processes for AI pilots by FY 2026.

Activities

- Launch an AI Administrative pilot innovation team
- Identify focus areas such as automation, forecasting, personalized support and eliminating bottlenecks

- Develop criteria to prioritize administrative processes that could lead to a reduction in processing time or minimizes error rates
- Prioritize based on business value and data/technical feasibility
- Coordinate with unit head and/or functional leads for prioritization
- Share outcomes and lessons learned from pilot efforts

Timeline

- Use case intake and evaluation: Spring-Fall 2026
- Initial pilots launched by Winter 2027

Dependencies

- Engagement from functional units to nominate use cases
- Access to baseline performance data
- Availability of internal or vendor tools

Resource Requirements

- Cross-functional team to vet and scope use cases
- Technical leads for feasibility analysis
- Pilot funding for tools, licenses, or integrations

Success Metrics

- 3-5 AI-enabled pilots launched by fiscal year (FY) 2027
- Demonstrated process improvements $\geq 25\%$ efficiency gains
- Clear documentation and feedback from functional partners

Objective 2: Conduct Build-vs-Buy Assessments for Priority Use Cases.

Activities

- Apply decision criteria: strategic value, risk, cost, speed, data readiness, internal capacity
- Use shared framework: business impact $\times$ feasibility
- Adopt commercial (buy) AI solutions where mature, secure, cost-effective
- Flag institution-specific use cases for internal building (e.g., via AggieAI)
- Form working group to develop standardized framework for AI use case evaluation

Timeline

- Build-vs-Buy analysis aligned with pilot intake timelines
- Framework working group launched Spring 2026

Dependencies

- Procurement and contract policy support
- Agreement on evaluation criteria and scoring
- Access to vendor market intelligence

Resource Requirements

- Under AI governance guidance or IT policy leads, consider an implementation subgroup that would recommend a framework.
- Determine if there is opportunity for partnering and co-creating.
- Legal and procurement input for vendor review
- Staff time to participate in framework development

Success Metrics

- 100% of selected use cases reviewed using shared criteria
- Documented decisions for Build-vs-Buy
- Use case evaluation framework published for campus-wide use

Objective 3: Pilot AI Tools that Improve Communication and Productivity

Activities

- Focus on tools that assist with summarization, drafting, and meeting efficiency
- Pilot ChatGPT EDU, Gemini, Zoom AI Companion in selected administrative settings
- Collect user feedback and measure impact on time savings
- Coordinate with IT Security and Privacy for safe deployment

Timeline

- Pilots scoped and launched Spring-Fall 2026
- Evaluation and recommendations by Winter 2027

Dependencies

- Access to enterprise licenses
- Willing pilot department
- Training and onboarding for participants

Resource Requirements

- Support staff for setup and training
- Access to pilot tools
- Survey tools and staff time for feedback collection

Success Metrics

- ≥75% of users report productivity improvement
- Pilot results presented and documented
- At least two tools adopted beyond pilot phase

Strategy 3: Develop a Campus AI Platform for Institution-Specific Use Cases

Encourage adoption of AggieAI tools, including Rocky and Gunrock, for administrative service delivery and operational efficiency, continuing to evaluate build-versus-buy approaches while ensuring staff have access to a secure, compliant, institutionally-supported AI environment for piloting and scaling beneficial applications.

Objective 1: Evolve the AggieAI architecture for secure, scalable internal services

Activities

- Expand capabilities to support more use cases with sensitive or complex workflows
- Maintain alignment with UC and campus data governance standards
- Monitor performance, compliance, and support needs

Timeline

- Ongoing throughout 2026 FY
- Platform milestones reviewed quarterly

Dependencies

- Stable funding model
- Cross-functional input on platform roadmap
- Integration with existing campus systems

Resource Requirements

- Dedicated engineering team
- Cloud infrastructure budget
- Product and security oversight

Success Metrics

- AggieAI used in at least three high-value service areas
- Platform uptime ≥99%
- Successful security and accessibility reviews

Objective 2: Create space for responsible experimentation and innovation

Activities

- Launch sandbox environments with scoped access and built-in safeguards
- Support low-risk AI experimentation by departments
- Share pilot results, patterns, and lessons learned
- Explore development of a framework for campus-wide data readiness for AI

Timeline

- Sandboxes launched by Summer 2026
- Data readiness framework discussion initiated in Fall 2026

Dependencies

- Agreement on sandbox government model
- Cross-unit interest and participation
- Data governance input on acceptable use

Resource Requirements

- Hosting environment and access control tools
- Staff to support onboarding and oversight
- Time from governance stakeholders to shape readiness criteria

Success Metrics

- At least five sandbox use cases tested
- Lessons learned shared with wider campus
- Initial draft of data readiness framework published

Objective 3: Embed AI into core UC Davis systems where public tools fall short

Activities

- Identify internal systems (e.g., LMS, HRIS, SIS) with AI integration potential
- Design use cases where AI augments not replaces core functionality
- Partner with system owners to scope integrations
- Prioritize privacy-preserving and accessible solutions

Timeline

- Integration planning by Fall 2026
- Pilots and deployment starting Winter 2027

Dependencies

- Engagement from system owners and vendors
- Security and privacy review pipeline
- Availability of integration APIs

Resource Requirements

- Developer time for integration
- Stakeholder meetings and design reviews
- Compliance testing

Success Metrics

- At least two successful integrations completed
- No major service disruptions
- Positive feedback from end users

3.3 AI Governance Subcommittee

The AI Governance Subcommittee was responsible for: (1) proposing a comprehensive AI governance model for academics and administration, (2) recommending policies, operational procedures, and accountability mechanisms for AI evaluation, approval, and ongoing oversight, and (3) recommending a structure for continuing campus governance of AI beyond the AI Steering Committee's term. Based on recommendations in the AI Council report and subsequent consultations, the subcommittee was asked to balance innovation and risk, allow for agility, and build on existing processes in its proposed governance model. Like the other subcommittees, it was also asked to develop an implementation plan for the governance model. This section includes the deliverables outlined above.

Proposed AI Governance Model

The AI Governance Subcommittee proposes the establishment of the Artificial Intelligence Oversight Committee (AIOC) to provide a structure for continuing campus governance of AI beyond the AI Steering Committee's term. The AIOC will serve as a standing subcommittee in the broader UC Davis IT governance framework. The committee's charge, which includes operational procedures and accountability mechanisms for AI evaluation and approval, is described below.

AIOC Charter

Purpose

The Artificial Intelligence Oversight Committee (AIOC) will be established to provide institutional governance for the responsible evaluation, approval, and ongoing oversight of artificial intelligence (AI) and machine learning (ML) systems at UC Davis for learning, teaching, research, and administrative purposes.

The AIOC will ensure that systems adopted at UC Davis align with the University of California's [Responsible AI Principles](#), IT Policies (e.g., IS-3), and UC Davis's institutional values and priorities, while enabling innovation that advances the university's mission.

Authority

The AIOC will be authorized by the Chancellor to:

1. Propose and review policies, standards, and procedures for AI governance.
2. Use a risk-based approach to review and approve AI systems intended for use at UC Davis.
3. Ensure that AI systems across their full lifecycle (from procurement through active use) align with applicable compliance requirements.
4. Maintain an inventory of approved AI tools and systems.

5. Support the prioritization and strategic development of AggieAI by advising on use-case selection and alignment with institutional needs.
6. Coordinate AI oversight with the Health Analytics Oversight Committee to ensure alignment across UC Davis.
7. Report on AI governance activities, emerging risks, and recommendations to the Chancellor, Chancellor's Cabinet, the Academic Senate, the Health AOC, and the interim Information Security Oversight Committee.

The AIOC operates as an institutional policy and risk oversight body and does not replace Unit Head accountability under IS-3. Unit Heads retain responsibility for risk acceptance within their Units and for ensuring compliance with campus information security policies. Units intending to use AI systems must complete the AIOC's process prior to implementation and use. A unit's security risk assessments conducted under IS-3 do not replace required AIOC review for AI and machine learning systems.

Where the AIOC determines that a proposed AI system presents unacceptable institutional risk, the matter will follow the appeals process as outlined below.

The AIOC will coordinate with the Chief Information Officer (CIO), Chief Information Security Officer (CISO), and the Campus Privacy Officer to ensure alignment with operational standards, exception management processes, and the procurement, security, and privacy review processes.

The AIOC's authority applies to campus-governed systems and institutional data and does not supersede existing university policies outside of the area of risk assessment or the regulatory authority of UC Davis Health within its clinical environment.

Scope

In Scope

The AIOC will have oversight responsibility for AI and machine learning systems that are used in teaching, learning, research, or administrative functions at UC Davis.

This includes AI systems that involve learning, inference, prediction, classification, recommendation, generation, decision support, or other adaptive capabilities, such as tools that perform predictive analytics, generate or classify content, make recommendations, support or automate decisions using learning based methods, or adapt their behavior based on data inputs.

As a part of its implementation of the AI Governance model, AIOC will work with the Office of Research to define more clearly what research will be included in scope and what will not.

Out of Scope

Research projects already subject to Institutional Review Board (IRB) oversight will not require AIOC review unless institutional data, enterprise systems, or high-impact administrative functions are involved.

The following will also fall outside of the AIOC's oversight:

- Simple automation without learning or inference capabilities (e.g., rule-based email or workflow automation, document and form automation)
- Descriptive analytics and standard reporting without predictive or prescriptive elements
- Consumer AI tools used for individual productivity that does not leverage institutional data
- AI systems overseen by the Health Analytics Oversight Committee; however, tools intended for deployment at both UC Davis and UC Davis Health remain subject to review by UCDH's AOC and/or AIOC.

Being outside of the scope of AIOC review will not remove the responsibility of following all applicable data, privacy, security, and institutional policies.

Committee Membership

Core Committee Members

- Chief Information and Digital Strategy Executive (chair)
- Campus Privacy Officer
- IET Chief Technology Officer
- Representative from each of the following groups
 - IT Security Office
 - Academic Senate's Committee on Information Technology, Committee on Research, Undergraduate Council or the Graduate Council
 - Dean's Technology Council
 - Associated Students, University of California, Davis (ASUCD)
 - Graduate Student Association (GSA)
 - Staff Assembly

The committee may invite subject matter experts (such as faculty AI experts), affected stakeholders, or representatives from other units to participate in specific reviews as non-voting participants.

Coordination with other Bodies

The bodies listed below serve as key coordinating partners in the AI governance process, engaged on an as-needed basis depending on the nature of the AI tool or use case under review as indicated in or interpreted from the AIOC tool review intake form.

- Academic Senate
- Academic Federation
- Health Analytics Oversight Committee
- Information Security Oversight Committee
- Institutional Review Board
- Academic Personnel
- Offices of the Chancellor and Provost
- Finance, Operations, and Accounting
- Human Resources
- Office of Research
- Student Affairs
- Undergraduate Admissions

Operating Procedures

Meetings

- The AIOC will meet monthly, with additional meetings scheduled as needed.
- A quorum will consist of a one third of the appointed members of the AIOC.
- Meetings may be conducted in person, virtually, or in a hybrid format.

Decision-Making

- Decisions will be made by majority of votes cast.
- All reviews will be conducted in accordance with the AI Risk Classification Framework detailed later in this document.

Documentation

- All AIOC decisions will be documented in writing, including the rationale, any conditions, and re-review requirements.
- Meeting minutes will be maintained and made available to committee members.

Appeals

A requestor that disagrees with an AIOC decision may appeal to the Chief Strategy Officer and Chief of Staff to the Chancellor. Appeals must be submitted in writing within 30 days of the AIOC's decision and should state the grounds for appeal and any new information not previously considered. If the requestor remains unsatisfied after this decision, a final

appeal may be submitted to the Chancellor, whose determination will serve as the ultimate authority in the appeals process.

Where AI systems impact both Campus and UC Davis Health, the AIOC and the Health AOC will coordinate review activities to ensure consistency in risk evaluation and approval decisions. If Campus and Health oversight bodies reach differing determinations regarding a shared system, the matter will be escalated to the Chancellor and the UC Davis Health CEO for resolution.

Reporting

The AIOC will provide:

- Annual Reports: A report to the Chancellor summarizing review activities, decisions, emerging trends, and recommendations for policy updates and investments.
- AI Inventory: Maintenance of a public-facing registry of approved AI tools at UC Davis.
- Ad Hoc Reports: As requested by university leadership or as warranted by significant developments.

This charter may be amended upon recommendation of the AIOC and approved by the Chancellor. Proposed amendments will be circulated to committee members at least 30 days prior to consideration.

AI Risk Classification Framework

Overview

The framework below proposes a risk-based approach to AI governance at UC Davis, grounded in the principle that the goal is to manage risk thoughtfully rather than eliminate it entirely. The level of AIOC review required is determined primarily by data protection level, with deliberate focus on high-impact and high-stakes use cases as the items warranting the greatest oversight before an AI system or tool may be deployed.

Data Protection Levels

UC Davis uses the University of California [data classification standard](#). The protection level is determined by the most sensitive data the AI system will access, process, or generate.

AI systems that access sensitive data, or whose outputs are intended for use in contexts involving sensitive or regulated information, will require additional review, safeguards, or restrictions.

When in doubt about what level data should be classified, stakeholders should consult the Privacy Officer or Information Security Office.

Impact Levels

Impact levels are determined by evaluating potential harms against the UC Responsible AI Principles.

Impact Level	Criteria	Examples
LOW	Decisions are easily reversible. No direct impact on an individual's rights, opportunities, or safety. Human review is standard practice. Minimal risk across all Responsible AI Principles.	Writing/editing assistance for non-sensitive or non-confidential information. Meeting scheduling. Search and retrieval tools. Translation aids. Brainstorming support.
MODERATE	Decisions affect resource allocation or service quality. Potential for bias affecting groups. Possible transparency concerns. Fairness, Transparency, or Appropriateness principles at moderate risk.	Course recommendations. Workload distribution tools. Predictive enrollment analytics. Chatbots answering student questions.
HIGH	Significantly affects individual opportunities, rights, or safety. Difficult to reverse. May affect protected classes. High stakes if incorrect. Significant risk to Fairness, Human Values, Accountability, or Privacy principles.	Admissions screening. Financial aid decisions. Hiring/promotion tools. Academic integrity detection. Threat assessment. Proctoring systems.

Risk Classification Matrix

This matrix will be used by Units to determine the required tier based on data protection level and impact.

	Protection Level	Low Impact	Moderate Impact	High Impact
Tier 1	P1 – P2 Data	Notify and Register	Notify and Register	Full AIOC Review
Tier 2	P3 – P4 Data	Full AIOC Review	Full AIOC Review	Full AIOC Review

Tier Definitions

Tier 1: Unit-Level Approval

Review Level: Unit head (department chair, director, or equivalent)

Timeline: Immediate upon attestation

Requirements

- Complete Tier 1 Attestation Form confirming the system meets minimum risk criteria
- Register the tool in the AI Inventory
- Annual re-attestation required
- No AIOC review is conducted unless concerns arise

Tier 2: Full AIOC Review

Review Level: Full AIOC Oversight Committee

Timeline: No more than 30 days

Requirements

- Submit completed Tier 2 Intake Form.
- Full AIOC committee review using information provided in the intake form, [UC Responsible AI Principles](#), and [UCOP Risk Assessment Guide](#).
- May require presentation by requesting unit
- Decision documented with conditions, monitoring requirements, and re-review triggers
- Annual re-review required if approved (see re-review section below for additional information)
- Appeals path available if not approved

Automatic Tier 2 Triggers

There may be use cases, such as the ones listed below, that inherently present potential high risks to UC Davis. Any proposal involving systems in these categories requires full AIOC review, regardless of data protection level.

Use Case Category	Rationale
Admissions or enrollment decisions	Significant impact on student opportunities; potential for bias
Financial aid or scholarship determinations	Direct financial impact on students; equity concerns
Hiring, promotion, or termination decisions	Employment decisions are legally sensitive; high individual impact; potential for bias

Use of biometric identification	Privacy/sensitivity of data; potential for surveillance concerns; potential for bias
Predictive threat or risk assessment	Safety implications; civil liberties concerns; risk of false positives; potential for bias
Autonomous decisions without human review options	Accountability requirements; inability to catch errors before impact
AI-enabled proctoring systems	Privacy/sensitivity of data; potential for bias; accessibility; student welfare

Review Criteria

AI systems subject to Tier 2 review will be evaluated against the UC Responsible AI Principles and the UCOP AI Risk Assessment. Additionally, existing AI tools that might meet business needs will also be considered.

Note that the AIOC may develop campus-specific review criteria over time, as it gains experience.

To support consistent and transparent decision-making, the AIOC will establish a standardized AI evaluation framework.

This framework will guide Units in preparing submissions and will include:

- Description of the business problem and expected value
- Risk and compliance considerations
- Data classification and protection level
- Build-versus-buy analysis
- Alignment with institutional strategy
- Monitoring and re-review expectations

The framework will be integrated into the Tier 2 Intake Form and published for campus use.

Re-Review Requirements

Previously approved AI systems will require re-review when:

- The AI system is applied to a new use case or domain
- The data classification level changes (e.g., new data sources are added)
- The model or algorithm is significantly updated by the supplier or developer
- The affected population changes (e.g., expansion to new student cohorts)
- Performance monitoring indicates that the system's accuracy or reliability has meaningfully declined
- Concerns or complaints are raised about system performance

- The scheduled annual review date is reached

Committee Note: Unit Head and Academic Senate Engagement

Following AIOC review, all AI tool determinations shall be routed to the relevant Unit Head and (for policy areas within its purview under Regents Bylaw 40 such as admissions and instruction) the Academic Senate Office for final authorization prior to any campus deployment or formal rejection. This routing applies regardless of the AIOC's recommendation.

The specific procedures governing this final authorization process, including timelines, required documentation, and escalation pathways, will be established by the AIOC as part of its initial implementation work.

Committee Note: Governance Implementation

Effective AI governance requires distinguishing between disclosure as policy and disclosure as infrastructure. Policy-layer disclosure captures stated intentions through syllabi, checklists, and attestation forms; infrastructure-layer disclosure embeds transparency at the point of interaction, generating observable data on how approved tools are behaving and actually being used on campus. Any such infrastructure must be built user-first: the system generates a user-visible, user-owned record before it generates institutional data, and institutional visibility flows through explicit user consent rather than around it. This ordering is not a design preference but the architectural difference between a transparency infrastructure and a monitoring infrastructure. The AIOC's long-term effectiveness depends on developing this transparent auditing capacity, and the campus should identify an accountable owner and success metric for it as part of the governance implementation plan.

Additional framing for this note can be found in the literature below.

- Raji et al. (2020), "Closing the AI Accountability Gap," ACM FAccT Conference, distinguishes between auditing as a policy act and the infrastructure required to make oversight continuous and meaningful.
- Bui et al. (2025), "The Limits of AI Data Transparency Policy: Three Disclosure Fallacies" (arxiv.org/abs/2601.18127), identifies a specification gap, enforcement gap, and impact gap in current disclosure regimes, arguing that what is required on paper and what produces meaningful transparency are structurally different problems.
- A recent review, "Ensuring Accountability and Transparency in AI-Driven Corporate Governance" (ResearchGate, 2025), reaches a similar conclusion from a

governance angle: principle-based frameworks consistently lack concrete mechanisms for implementation and verification.

AI Governance Framework Implementation Plan

The AI Oversight Committee's implementation is organized around six objectives, each aligned to a specific governance outcome.

Objectives

1. Establish the AIOC as a Formally Authorized Standing Body within the UC Davis IT Governance Framework
2. Operationalize the Risk Classification Framework
3. Build Institutional Understanding of the AI Governance Model
4. Build and Maintain the Campus AI Inventory
5. Coordinate Across Institutional Partners

Proposed AI Use Policy

The AI Governance Subcommittee recommends the adoption of a campus-wide AI Use Policy to establish a shared baseline of expectations for all members of the UC Davis community who use AI tools in the course of their academic, research, administrative, or clinical activities. This policy is intended to complement the AI Risk Classification Framework, AIOC oversight processes, along with existing UCOP and UC policies, and to operationalize the UC Responsible AI Principles at the individual user level. The policy should address the following behavioral principles and procedural requirements.

Behavioral Principles

- A human must remain active at every stage of AI-assisted decision-making. AI tools may inform, support, or accelerate a decision, but no consequential decision may be made by an AI system alone. The individual or unit that acts on AI-generated output retains full responsibility for that action.
- The user accepts responsibility for any institutional data shared with a generative AI system. Prior to sharing data with any AI tool, users must verify that the tool is approved for the applicable data protection level and that its use is consistent with applicable UC Davis data governance policies and the UC Protection Level Classification Standard.
- Those who build, deploy, or offer AI-powered tools and agents at UC Davis must clearly disclose to users when they are interacting with or receiving outputs from an AI system. This disclosure must be made at the point of interaction and must not require users to seek it out.
- Users must continuously evaluate AI-generated outputs for accuracy, bias, and fitness for purpose. AI systems can produce plausible but incorrect, incomplete, or biased results. Users are expected to apply professional and disciplinary judgment to any output before acting on or disseminating it.

Procedural Requirements

The following requirements govern how AI tools are reviewed and approved for use at UC Davis, consistent with the Risk Classification Framework described above:

- AI tools used with data classified at Protection Level 1 or 2 require unit-level self-attestation via the Tier 1 Attestation Form. The unit head or designee must confirm that the tool meets minimum risk criteria and register it in the campus AI Inventory.

- Any AI tool that will access, process, or generate data classified at Protection Level 3 or 4 requires full review and approval by the Artificial Intelligence Oversight Committee (AIOC) prior to its use. Units must submit a Tier 2 Intake Form and receive written AIOC approval before implementation.
- Approved AI tools are subject to periodic re-review. Annual re-attestation is required for all registered tools. In addition, re-review is triggered by material changes to the tool, its data inputs, its use case, or its affected population, and by concerns raised about system performance or equity impacts. Re-review requirements are described in full in the Re-Review Requirements section above.

The AIOC will publish guidance, training resources, and attestation forms to support campus compliance and will report on policy adherence through its annual report to the Chancellor.

AI Governance Implementation Plan Details

ID	Objective & Activity	Accountability	Timeline	Dependencies	Resource Requirements	Success Metrics
Objective 1: Establish the AIOC as a Formally Authorized Standing Body within the UC Davis IT Governance Framework						
O1.A1	Secure formal authorization of the AIOC by the Chancellor as a standing subcommittee of the UC Davis IT governance framework.	AI Steering Committee	Summer 2026 – Fall 2026	N/A	N/A	- Chancellor's formal authorization is documented and issued by the target date - AIOC is reflected in official UC Davis IT Governance Framework documentation - AIOC charter is published on the governance website
O1.A2	Brief the Chancellor's Leadership Council, Provost's Leadership Council, Academic Senate, Dean's Technology Council, and other key stakeholders on the AIOC prior to formal launch to ensure awareness and readiness.	Chief Information and Digital Strategy Executive	Summer 2026 – Fall 2026	O1.A1	N/A	- All identified stakeholder bodies receive a briefing before the formal launch date - No major stakeholder group raises a foundational objection at or after launch that could have been surfaced earlier - Stakeholder questions and concerns are documented and addressed prior to launch
Objective 2: Operationalize the Risk Classification Framework						
O2.A1	Publish the AI Risk Classification Matrix, Tier definitions, and automatic Tier 2 triggers for campus use.	AIOC	Summer 2026	O1.A1	Administrative Support	- Matrix and Tier definitions are published on a publicly accessible UC Davis webpage by the target date - Campus units can independently and correctly classify AI tools using the published matrix
O2.A2	Develop and deploy the Tier 1 Attestation Form and Tier 2 Intake Form as official submission pathways.	AIOC	Summer 2026	O1.A1	Administrative Support, License for workflow tool to manage forms	- Both forms are live and accessible by the target date - First submissions are received

						Form completion rate (submissions without support requests) is tracked as a proxy for clarity
<i>Objective 3: Build Institutional Understanding of the AI Governance Model</i>						
O3.A1	Develop and deploy unit-facing guidance, training, and resources on the AI governance process.	AIOC	Summer 2026	O1.A1 O2.A1 O2.A2	Administrative Support	- Guidance materials are published and linked from relevant institutional pages by the target date - Data suggests units access materials - Training completion rates among designated unit liaisons or IT leads (if a structured training is deployed) - Reduction in submission errors or incomplete intake forms over time
O3.A2	Create and launch communication materials to help campus stakeholders understand when AIOC review is required, how to submit, and what to expect.	AIOC	Summer 2026	O3.A1	Administrative Support	- Communication materials are distributed across established channels (e.g., Dateline, IT listservs, leadership newsletters) by launch - Inbound questions about "when review is required" decline over the first two quarters as awareness grows
<i>Objective 4: Build and Maintain the Campus AI Inventory</i>						
O4.A1	Launch and maintain a publicly accessible registry of AIOC-reviewed and approved AI tools at UC Davis.	AIOC	Summer 2026	O2.A2	Administrative Support, License for workflow tool to manage forms and publish tool review status	- Registry is live and publicly accessible by the target date - Registry is updated within a defined SLA (e.g., 10 business days) following AIOC approval decisions
O4.A2	Ensure annual re-attestation workflows are embedded and enforced across both Tier 1 and Tier 2 systems.	AIOC	Summer 2026	O2.A2	Administrative Support, License for workflow tool to provide re-attestation notifications	Re-attestation workflow is documented and built into the AIOC operating calendar and workflow tools

						▪ 100% of Tier 1 and Tier 2 tools due for re-attestation receive a renewal notice within the defined window ▪ Re-attestation completion rate (percentage of tools that complete renewal on time vs. lapsing) is tracked and reported
<i>Objective 5: Coordinate Across Institutional Partners</i>						
O5.A1	Establish formal coordination protocols with the UC Davis Health Analytics Oversight Committee for shared AI systems.	CIDSE	Fall 2026	O1.A2	N/A	▪ A formal coordination protocol is in effect by the target date ▪ Shared AI systems are identified and dual-routed appropriately within the first review cycle
O5.A2	Align AIOC processes with the Information Security Oversight Committee (ISOC), Procurement and Contracting Services, and Office of Research.	AIOC	Fall 2026	O1.A2	N/A	▪ Alignment is documented in writing (e.g., updated RACI, formal referral agreements, or process maps) with each partner body ▪ No AI tool procurement proceeds through Procurement and Contracting Services without an AIOC classification on file ▪ ISOC and AIOC agendas reflect cross-referral of relevant items

4. Investment Requests

The AI Investment Subcommittee was responsible for: (1) consolidating the resource needs identified by the AI Steering subcommittees, (2) identifying tool, infrastructure, and capacity gaps, (3) determining what financial investments are needed to support the proposed implementation plans, and (4) submitting a prioritized investment proposal. To fulfill its responsibilities, the subcommittee conducted consultations with eleven campus units to identify whether they had the capacity to absorb the activities identified in each subcommittee's implementation plan or whether additional resources were needed.

Note that the AI Research Subcommittee resource needs will be advanced via the START process.

Consultations

Units	Participants
Career Center	Andrea Hanson
Center for Artificial Intelligence and Experimental Futures	Colin Milburn
Center for Engineering	Raissa D'Souza
Continuing and Professional Education	Julie Greenwood
DataLab	Carl Stahmer
Development and Alumni Relations	Shaun Keister, Megan Padovani
Provost's Office	John Marx
Information and Educational Technology	Viji Murali, Neeraj Chauhan, Sonja Colbert
Learning and Organizational Development	Annalisa Teixeira, Jacob Miller, Susan McCutcheon
Student Affairs	Pablo Reguepín, Letty Quintana
Undergraduate Education	Michael Bradford, Beth Broome

Request Details

The table below consolidates identified AI investment needs. As requested by Business and Institutional Analysis, for each item, the table identifies what the funding is for, the fiscal year(s) in which funding is needed, and whether the request is for one-time or ongoing support.

The committee did not have time to revisit the initial prioritization discussion, and as such, what was ultimately presented at the 2026-27 Centralized IT Investments Budget Meeting was determined by the AI Steering Committee co-chairs. Further, a budget request was not

submitted for the DataLab activities, as more discussion was needed related to the scope of the work.

Description	Fiscal Year(s)	One-Time or Ongoing	Estimated Costs
Support for alumni panels and networking events for students to learn what AI skills will be most useful to them after graduation. This includes costs for renting space (\$1000/event), honorariums (\$100/person), and parking (\$18/day/person)	FY26-27	One-time	\$3,354 (assumes 3 events with the following costs: renting space (\$1000/event), honorariums (\$100/person), and parking (\$18/day/person)
4 course releases (convertible to academic enrichment funds) to support the development of comprehensive, layered training and resources to support both instructors and students in effectively learning, adapting, and applying AI tools across disciplines, including advanced pedagogical uses and foundational skills development	FY26-27	One-time	\$68,000 (\$17,000/course release)
Token costs for the per-query compute charges incurred each time a user interacts with the AggieAI platform	FY26-27	On-going	\$50,000
2 developers position to support the continued build-out, maintenance, and scaling of AggieAI ensuring that it remains secure, compliant, performant, and responsive to growing campus demand	FY26-27	On-going	\$536,366
AI Communications Specialist to support the development and management of central AI communication (e.g., website, campus communications around AI governance and cybersecurity)	FY26-27	On-going	\$138,336
Student Affairs staff compensation to develop AI-related orientation	FY26-27	One-time	\$118,612

materials and academic misconduct protocols			
Series of researcher focused cross-campus events on AI and Society, AI ethics, AI entrepreneurship	FY26-27	One-time	\$20,000.00
Learning and Organizational Develop: staffing to develop AI programming for staff	FY26-27	On-going	\$583,262
Undergraduate Education: educational specialist/AI designer for workshops, consultations, learning communities and assessment design support OR contracting funds to hire contractors	FY26-27	On-going	\$177,636
Funding for a series of AI events facilitated by student groups (e.g., AI Collective)	FY26-27	One-time	\$5,000
DataLab: general workshops for students and faculty for basic use of AI tools and workshops on more advanced discipline specific applications for AI tools for upper division courses and research	To be determined		
	\$1,700,566	\$214,966 (One-time)	\$1,485,600 (On-going)

AI Centers	Instruction	2	1 and 2	Instructor knowledge and mastery of AI tools	Create supportive, multi-layered resources to provide education and training for instructors who wish to integrate or consider integrating AI into their courses or create new ones doing so	UE, DataLab, IET, AI Centers	N		Instructor Development and Support

AI Centers	Instruction	2	1 and 2	Knowledge and tools to maintain student and instructor data privacy	Scale up training for instructors in advanced applications of AI tools that instructors can adapt to discipline-specific pedagogy	DataLab, AI Centers	N		Instructor Development and Support
AI Centers	Instruction	3	3	Access for students to workshops to learn basic use of AI tools	With support from IET where needed, create and offer workshops for students to learn basic use of AI tools outside of class	IET, DataLab, AI Centers	Y	CIDSE	Student-Centered AI Integration
Associate Deans for Research	Research	3	1	Ensure ethical and responsible use of AI in research	Encourage departments/centers to discuss and clarify expectations for responsible AI use in the academic field, including authoring (grants, publications) and reviewing, and in handling research data.	VCR, AVCRs, Associate Deans for Research, Academic Senate, Academic departments and graduate programs			
Associate Deans for Research and Center Directors	Research	2	1	Connect UC Davis researchers with collaborators for research on AI and AI experts	Meet with VCR and research leadership from college and schools to discuss approaches	VCR, AVCr, Deans, ADRs	N		Facilitate Collaboration and Access to AI Enterprise
Associate Deans for Research and Center Directors	Research	3	1	Ensure ethical and responsible use of AI in research	Consult with OR on revisions to instructions for internal grant applicants and reviewers to be clear on allowable use of AI.	VCR, CITSO, Associate Deans of Research, Academic Senate			
Chancellor	Research	1	3	Advocate with UCOP for preferred-pricing agreements or explore UC Davis agreements	Advocate with UCOP for preferred-pricing agreements for access to LLM platforms that include researcher's preferred choices of tools and meet privacy and security requirements or explore similar UC Davis agreements.	VCR, VCFOA, EVC, Chancellor, Academic Senate	N		Assure Access to Compute Resources and LLM Tools
CIDSE	Instruction	1	6	Central UCD website with dashboard	Assemble links to lists of AI-related course lists and events across campus, curate and establish a central website to post.	CIDSE, IET, Colleges and Professional Schools, AI Centers, DataLab	Y		Teaching and Learning
CIDSE	Instruction	1	6	Central UCD website with dashboard	Create and maintain central website with links to course lists, resources, and events related to AI use in scholarly activities on the two campuses	Y	Y		Teaching and Learning
CIDSE	Instruction	1	All	Monitor implementation	Monitor implementation of strategy	Coordinating Committee	Y		Teaching and Learning
CIDSE	Research	2	1	Connect UC Davis researchers with collaborators for research on AI and AI experts	Vice Chancellor for Research should collaborate with CIDSE to create website and tie into any central UC Davis web resources (expecting a central hub based on other subcommittee recommendations).	CIDSE, VCR	Y		Facilitate Collaboration and Access to AI Enterprise
CIDSE	Instruction	2	4	Identify IT support and appropriate point of contact for faculty building tools or ad-ons to teach a specific topic or skill	Identify and publicize appropriate IT support or point of contact for faculty who wish to build tools or ad-ons to help an instructor teach a specific topic or skill	N	Y		Instructor Development and Support
CIDSE	Instruction	2	All	Monitor implementation of strategy	Monitor implementation of strategy	Y	Y		Instructor Development and Support
CIDSE	Instruction	3	All	All	Monitor implementation of strategy	Y	Y		Student-Centered AI Integration
CIDSE/CIO	Research	1	3	Advocate with UCOP for preferred-pricing agreements or explore UC Davis agreements	Advocate with UCOP for preferred-pricing agreements for access to LLM platforms that include researcher's preferred choices of tools and meet privacy and security requirements or explore similar UC Davis agreements.	VCR, VCFOA, EVC, Chancellor, Academic Senate	N		Assure Access to Compute Resources and LLM Tools
CITSO	Research	3	1	Ensure ethical and responsible use of AI in research	Consult with OR on revisions to instructions for internal grant applicants and reviewers to be clear on allowable use of AI.	VCR, CITSO, Associate Deans of Research, Academic Senate			
Colleges and Professional Schools	Instruction	1	5	Post lists of courses teaching AI-related skills or content	Compile and establish a system for continuous update of a list of courses integrating instruction aimed at achieving competency with (understanding and using) AI tools and usage.	Colleges and Professional School Deans, academic departments	Y		Teaching and Learning
CPE	Instruction	1	1	Data privacy and ethical standards	Assist professional schools who wish to create training modules to help students understand data privacy and ethical standards for AI use	IET, Professional Schools, CPE	N	Professional School Associate Deans	Teaching and Learning
DataLab	Instruction	2	1	Instructor knowledge and mastery of AI tools	Create supportive, multi-layered resources to provide education and training for instructors who wish to integrate or consider integrating AI into their courses or create new ones doing so	UE, DataLab, IET, AI Centers	N	Coordinating Committee, College and School Deans	Instructor Development and Support
DataLab	Instruction	2	1	Instructor knowledge and mastery of AI tools	Scale up training for instructors in advanced applications of AI tools that instructors can adapt to discipline-specific pedagogy	DataLab, AI Centers	N	Coordinating Committee	Instructor Development and Support
DataLab	Instruction	3	3	Access for students to workshops to learn basic use of AI tools	With support from IET where needed, create and offer workshops for students to learn basic use of AI tools outside of class	IET, DataLab, AI Centers	Y	CIDSE	Student-Centered AI Integration
DEVAR	Instruction	1	7	Bridging with alumni for AI-readiness	Facilitate connection between academic programs and alumni in support of discipline-specific student-alumni events	Y	N	Associate Deans for Academic Programs and College/School Development Officers	Teaching and Learning
DEVAR	Instruction	3	2 and 4	Access for students to workshops to learn basic use of AI tools that safeguard data privacy	Support for fundraising for DataLab and centers that help increase access to AI tools and educational experiences	DEVAR, DataLab, AI Centers, Schools and Colleges, IET	Y	DEVAR, AI Centers, DataLab, Schools and Colleges, IET	Student-Centered AI Integration

EVC	Research	1	1	Complete action on START recommendations on HPC, research data security and file storage, network infrastructure	Provost decides whether to approve START Research Computing Workgroup recommendations 4 (research security and data storage) and 5 (campus network and security)	EVC	N	Y	Assure Access to Compute Resources and LLM Tools
EVC	Research	1	2	Complete action on START recommendations on HPC, research data security and file storage, network infrastructure	Add START Research Computing Workgroup recommendations 4 (research security and data storage) and 5 (campus network and security) to STARC Committee Charge	EVC, VCR	Y		Assure Access to Compute Resources and LLM Tools
EVC	Research	1	3	Advocate with UCOP for preferred-pricing agreements or explore UC Davis agreements	Advocate with UCOP for preferred-pricing agreements for access to LLM platforms that include researcher's preferred choices of tools and meet privacy and security requirements or explore similar UC Davis agreements.	VCR, VCFOA, EVC, Chancellor, Academic Senate	N		Assure Access to Compute Resources and LLM Tools
EVC, John Marx	Instruction	4	5	Opportunities to administer proctored in-person exams for online courses	Establish opportunities and protocols such as the new UC Testing Center Pilot or community library proctoring for instructors teaching online courses who wish to use proctored, in-person final exams to ensure mastery.	Academic Council, Systemwide Provost, EVC, John Marx	Y		Academic Integrity in the AI Era
Graduate programs	Instruction	1	3	Orientation materials for acceptable use	Compile checklist for orientation with either (i) questions for students to ask in individual course and research settings to understand acceptable AI use or (ii) established criteria for acceptable use of AI in coursework and research	N	Y	Graduate Program Chairs	Teaching and Learning
ICC	Instruction	1	7	Bridging with alumni and employers for AI-readiness	Facilitate connection between academic programs and alumni & employers in support of discipline-specific student-alumni & employer events	Y	Y	ICC	Teaching and Learning
ICC	Instruction	1	7	Bridging with alumni and employers for AI-readiness	Support alumni and employer panels and networking events for students to learn what AI skills will be most useful to them after graduation	Y	Y	ICC	Teaching and Learning
IET	Instruction	1	1	Data privacy and ethical standards	Compile list of FAQs aimed at helping students make the best choices to safeguard data privacy and ethical standards when using AI tools	Information Oversight Committee, Academic Senate Committee on Information Technology	Y	IET	Teaching and Learning
IET	Instruction	1	1	Data privacy and ethical standards	Assist professional schools who wish to create training modules to help students understand data privacy and ethical standards for AI use	Professional Schools, CPE, IET	N	Professional School Associate Deans	Teaching and Learning
IET	Instruction	1	6	Assemble and post links to course AI-related course lists on central hub	Partner with CIDSE to assemble links to lists of AI-related course lists and events across campus, curate and establish a central website to post	CIDSE, IET, Colleges and Professional Schools, AI Centers, DataLab	N	CIDSE	Teaching and Learning
IET	Instruction	1	6	Central UCD website with dashboard	Partner with CIDSE to maintain central website for AI courses, resources and events on the two campuses	Y	N	CIDSE	Teaching and Learning
IET	Instruction	2	1	Instructor knowledge and mastery of AI tools	Create supportive, multi-layered resources to provide education and training for instructors who wish to integrate or consider integrating AI into their courses or create new ones doing so	UE, DataLab, IET, AI Centers	N	Coordinating Committee	Instructor Development and Support
IET	Instruction	2	1	Instructor knowledge and mastery of AI tools	Create and facilitate entry-level workshops for instructors on availability and use of AI tools	UE, IET	Y	Coordinating Committee	Instructor Development and Support
IET	Instruction	2	2	Integrate compliance requirements into existing training modules	With UCOP, integrate AI-related compliance training for instructors into existing training modules on cybersecurity, ethics, etc.	Y	N	CIDSE	Instructor Development and Support
IET	Instruction	3	1	Access for students to high-quality AI tools that safeguard data privacy	License and curate AI tools appropriate for student and academic use	IET, Instructors, ASUCD	Y		Student-Centered AI Integration
IET	Instruction	3	1	Access for students to high-quality AI tools that safeguard data privacy	Provide low-cost access to AI tools for students	IET, ASUCD, UE	Y		Student-Centered AI Integration
IET	Instruction	3	1	Access for students to high-quality AI tools that safeguard data privacy	Implement vetting process for new tools piloted for introduction by individual instructors	ISOC, AIOC	N	Governance body	Student-Centered AI Integration
IET	Instruction	3	2	Awareness across campus of student needs and mastery with respect to AI tools and access	Consult with ASUCD on latest AI tools and student needs	IET, UE, ASUCD	N	UE	Student-Centered AI Integration
IET	Instruction	3	3	Access for students to workshops to learn basic use of AI tools	Assist admin and academic units to create and provide workshops to students for learning basic use of AI tools outside of class	IET, Academic units, UE	N	Stakeholders	Student-Centered AI Integration
Instructors of record	Instruction	2	4	Course and program policy	Review and (if needed) update course pedagogy, assessment, and curriculum	Y	N	Degree program chairs	Instructor Development and Support
Professional schools	Instruction	1	1	Data privacy and ethical standards	Create training modules to help students understand data privacy and ethical standards for AI use	IET, CPE, Professional Schools	N	Professional School Associate Deans	Teaching and Learning
SOM	Instruction	5	1	Understanding the impact of AI tools on skill-building during professional school training	Promote research on impact of use of AI tools on skill-building during professional school training with regard to (1) potential loss of human ability to read slides and other lab results, conduct physical exams, and transcribe personal notes during office exams and other activities; (2) intrinsic motivation to learn the foundations of medicine	IET, SOM, SVM, SON	Y		Innovation in Health Professions Education

SON	Instruction	5	1	Understanding the impact of AI tools on skill-building during professional school training	Promote research on impact of use of AI tools on skill-building during professional school training with regard to (1) potential loss of human ability to read slides and other lab results, conduct physical exams, and transcribe personal notes during office exams and other activities; (2) intrinsic motivation to learn the foundations of medicine	IET, SOM, SVM, SON	Y		Innovation in Health Professions Education
STARC	Research	1	1	Complete action on START recommendations on HPC, research data security and file storage, network infrastructure	If charged by the Provost and VCR, carry out START recommendations on high-performance computing, research data security and file storage, campus network infrastructure to assure basic infrastructure on campus is fit for purpose.	STARC, Provost, VCR	N		Assure Access to Compute Resources and LLM Tools
Student Affairs	Instruction	4	1	Academic integrity policies and protocols	Draft local implementation plan for systemwide Interim Policy on Student Conduct and Discipline & Appendix H (Interim PACAOS 100); finalize following campus review	Student Affairs, UE, Academic Senate	Y		Academic Integrity in the AI Era
Student Affairs	Instruction	4	2	Shared faculty resources for AI-related integrity in the classroom	Partner with office of Academic Senate and CEE to design materials to help faculty understand academic integrity protocols and non-punitive options to promote academic integrity	Student Affairs, UE, Academic Senate			Academic Integrity in the AI Era
Student Affairs	Instruction	4	3	Clear communication to students about acceptable use of AI tools in coursework	Integrate any needed guidance due to changes to PACAOS 100 and the local implementation plan into Orientation materials for incoming undergraduate students and communications to continuing students	Student Affairs, UE, Academic Senate	Y		Academic Integrity in the AI Era
Student Affairs	Instruction	4	4	Ethical, accurate practices for detection of violations involving misuses of AI	Establish best practices for selecting tools used to detect violations of academic integrity involving misuse of AI	Student Affairs, UE, Academic Senate	Y		Academic Integrity in the AI Era
SVM	Instruction	5	1	Understanding the impact of AI tools on skill-building during professional school training	Promote research on impact of use of AI tools on skill-building during professional school training with regard to (1) potential loss of human ability to read slides and other lab results, conduct physical exams, and transcribe personal notes during office exams and other activities; (2) intrinsic motivation to learn the foundations of medicine	IET, SOM, SVM, SON	Y		Innovation in Health Professions Education
UC Provost	Instruction	4	5	Opportunities to administer proctored in-person exams for online courses	Establish opportunities and protocols such as the new UC Testing Center Pilot or community library proctoring for instructors teaching online courses who wish to use proctored, in-person final exams to ensure mastery.	Academic Council, Systemwide Provost, UCD Provost	Y		Academic Integrity in the AI Era
UE	Instruction	1	2	Disseminate list of questions that students need to ask to understand what constitutes acceptable use of AI tools in coursework and experiential learning environments	Communication to students with a list of questions that students need to ask to understand what constitutes acceptable use of AI tools in a particular course or other scholarly activity and in experiential learning environments	Academic Senate, Student Affairs Office of Student Conduct, UE, ASUCD	Y (Kayton Carter)	UE	Teaching and Learning
UE	Instruction	1	4	First Year Seminars on AI tools and use	Issue call for faculty to submit proposals for First Year Seminars integrating instruction in AI tools and usage	UE, Instructors and Academic Units	Y	UE	Teaching and Learning
UE	Instruction	2	1 and 2	Instructor knowledge and mastery of AI tools	Facilitate new Faculty Learning Communities for AI in the Classroom	UE, DataLab, instructors	Y		Instructor Development and Support
UE	Instruction	2	1 and 2	Course policies that respect the diversity of AI use across disciplines	Create a curated cache (video) of example assignment designs and pedagogical approaches made available to instructors	UE, Instructors and Academic Units	Y		Instructor Development and Support
UE	Instruction	2	1 and 2	Instructor knowledge and mastery of AI tools	Create and facilitate entry-level workshops for instructors on availability and use of AI tools	UE, DataLab, IET	Y		Instructor Development and Support
UE	Instruction	2	1 and 2	Course policies that respect the diversity of AI use across disciplines	Disseminate template language for syllabi and communications with students to aid instructors wishing to communicate more clearly about acceptable AI use	UE, Academic Senate	Y		Instructor Development and Support
UE	Instruction	2	1 and 2	Instructor knowledge and mastery of AI tools	Individual consultations (by request) for faculty integrating AI into their courses	UE, Instructors and Academic Units	N		Instructor Development and Support
UE-CEE	Instruction	2	1 and 2	Instructor knowledge and mastery of AI tools	Create supportive, multi-layered resources to provide education and training for instructors who wish to integrate or consider integrating AI into their courses or create new ones doing so	UE, Academic Senate	Y		Instructor Development and Support
UE-Writing Center	Instruction	2	1 and 2	Instructor knowledge and mastery of AI tools	Create supportive, multi-layered resources to provide education and training for instructors who wish to integrate or consider integrating AI into their courses or create new ones doing so	UE, Academic Senate	N		Instructor Development and Support
UE	Instruction	3	2	Awareness across campus of student needs and mastery with respect to AI tools and access	Regular surveys of student experience and outcomes with respect to AI access and mastery	N	Y		Student-Centered AI Integration
UE	Instruction	4	2	Shared faculty resources for AI-related integrity in the classroom	Update and disseminate template language for syllabi and communications with students to aid instructors wishing to communicate more clearly about acceptable AI use				Academic Integrity in the AI Era

UE	Instruction	4	4	Ethical, accurate practices for detection of violations involving misuses of AI	Consult with Office of Student Conduct as they draft best practices for selecting tools used to detect violations involving misuse of AI	ATS, OSCI, Academic Senate			Academic Integrity in the AI Era
VCFOA	Research	1	3	Advocate with UCOP for preferred-pricing agreements or explore UC Davis agreements	Advocate with UCOP for preferred-pricing agreements for access to LLM platforms that include researcher's preferred choices of tools and meet privacy and security requirements or explore similar UC Davis agreements.	VCR, VCFOA, EVC, Chancellor, Academic Senate	N		Assure Access to Compute Resources and LLM Tools
VCR	Research	1	2	Complete action on START recommendations on HPC, research data security and file storage, network infrastructure	If approved by the Provost, add START Research Computing Workgroup recommendations 4 (research security and data storage) and 5 (campus network and security) to STARC Committee Charge	EVC, VCR	Y		Assure Access to Compute Resources and LLM Tools
VCR	Research	1	3	Advocate with UCOP for preferred-pricing agreements or explore UC Davis agreements	Advocate with UCOP for preferred-pricing agreements for access to LLM platforms that include researcher's preferred choices of tools and meet privacy and security requirements or explore similar UC Davis agreements.	VCR, VCFOA, EVC, Chancellor, Academic Senate	Y		Assure Access to Compute Resources and LLM Tools
VCR	Research	2	1	Connect UC Davis researchers with collaborators for research on AI and AI experts	Vice Chancellor for Research should collaborate with CIDSE to create website and tie into any central UC Davis web resources (expecting a central hub based on other subcommittee recommendations).	CIDSE, VCR	Y		Facilitate Collaboration and Access to AI Enterprise
VCR	Research	2	1	Connect UC Davis researchers with collaborators for research on AI and AI experts	Coordinate and organize multidisciplinary research engagement.	VCR	Y		Facilitate Collaboration and Access to AI Enterprise
VCR, AVCR	Research	2	1	Connect UC Davis researchers with collaborators for research on AI and AI experts	Vice Chancellor for Research or Associate Vice Chancellor for Research convenes Associate Deans for Research of all Colleges and Schools (or their designees, including any they wish to include in addition to this list and Center Directors) to discuss approaches	VCR, AVCR, Deans, ADRs	Y		Facilitate Collaboration and Access to AI Enterprise
VCR	Research	3	1	Ensure ethical and responsible use of AI in research	Facilitate campuswide workshops on ethical and responsible use of AI in research	VCR	Y		Assure Responsible Use of AI in Research
VCR	Research	3	1	Ensure ethical and responsible use of AI in research	Revise instructions for internal grant applicants and reviewers to be clear on allowable use of AI.	VCR, CITSO, Associate Deans of Research, Academic Senate	Y		Assure Responsible Use of AI in Research
VCR	Research	3	1	Ensure ethical and responsible use of AI in research	Create or compile templates or other supportive materials to support department and center heads who wish to lead discussions about responsible use of AI in research or provide example language for faculty to consider.	VCR, Academic Senate	Y		Assure Responsible Use of AI in Research
VCR, AVCRs	Research	3	1	Ensure ethical and responsible use of AI in research	Encourage departments/centers to discuss and clarify expectations for responsible AI use in the academic field, including authoring (grants, publications) and reviewing, and in handling research data.	VCR, AVCRs, Academic Senate, Academic departments and graduate programs	Y		Assure Responsible Use of AI in Research
VCR, AVCRs, and OR staff	Research	3	1	Ensure ethical and responsible use of AI in research	Update available training to ensure AI is specifically addressed in responsible conduct of research, human subjects research training etc.	VCR	Y		Assure Responsible Use of AI in Research

Administrative AI

STRATEGY 1: Workforce Readiness		Provide role-appropriate training for staff across all divisions to understand AI capabilities, limitations, and responsible use, enabling employees to leverage AI tools effectively while managing associated risks.
Primary Unit Responsible for Objectives 1-5: Human Resources		
OBJECTIVE 1: Increase communication pathways and outreach of existing AI training, guidance, and toolkits across campus.		
Activity	Collaborating Departments	
Curate inventory of AI training offerings	IET; Learning and Organizational Development (L&OD); Strategic Communications; Continuing & Professional Education	
Develop campus-wide communication strategy for AI training	Strategic Communications; IET; L&OD	
Identify AI champions across units	IET; L&OD; Departmental leadership	
Embed AI modules into onboarding programs	L&OD; HR; IET	
Host recurring AI information sessions	IET; L&OD; Strategic Communications; Admin Units, Schools, and Colleges	
OBJECTIVE 2: Enhance progressive AI training offerings		
Activity	Collaborating Departments	
Increase awareness of advanced AI training offerings	IET; L&OD; Strategic Communications	
Evaluate quality of existing training programs	IET; L&OD; Advanced AI users (committee formed and led by Chief Information & Digital Strategy Executive)	
Develop structured AI competency pathways	IET; L&OD; Continuing Education	
Fund staff scholarship program for AI training	Staff Assembly; Administration; Finance	
Establish train-the-trainer program	IET; L&OD; Advanced AI users (committee formed and led by Chief Information & Digital Strategy Executive)	
OBJECTIVE 3: Develop hands-on AI learning opportunities		
Activity	Collaborating Departments	
Launch AI community of practice	IET; L&OD	
Enable interdepartmental AI knowledge sharing	IET; L&OD; Departments	
OBJECTIVE 4: Cultivate AI recognition opportunities		
Activity	Collaborating Departments	
Expand professional development events with AI content	Office of Business Transformation; HR; Strategic Communications; Staff Assembly	
Highlight AI innovators in communications	Strategic Communications	
Provide seed grants for AI innovation	Staff Assembly; Office of Business Transformation	
OBJECTIVE 5: Ensure responsible AI use awareness		
Activity	Collaborating Departments	
Increase completion of AI Essentials training	L&OD; IET; Strategic Communications	

Embed responsible AI reminders in tools	IET; Security; Platform owners
Conduct AI cybersecurity communications	IET; Strategic Communications
STRATEGY 2: Enhance Administrative Services through Targeted AI Implementation	Identify and pilot AI applications that meaningfully improve service delivery, operational efficiency, and constituent experience for students, patients, faculty, and staff—scaling successful initiatives and sharing lessons learned across units.
Primary Unit Responsible for Objectives 1-3: IET forms a cross functional team	
<i>OBJECTIVE 1: Identify and prioritize AI pilot processes</i>	
Activity	Collaborating Departments
Launch AI administrative pilot innovation team	Cross-functional team; Functional unit leaders; IT
Identify and prioritize AI use cases	Functional units; Technical leads
Develop prioritization criteria for AI processes	Cross-functional team; Data/IT analysts
Share pilot outcomes and lessons learned	Project team; Strategic Communications
<i>OBJECTIVE 2: Build-vs-Buy evaluation for use cases</i>	
Activity	Collaborating Departments
Conduct Build-vs-Buy assessments	IT governance; Procurement; Legal
Develop standardized evaluation framework	Cross functional team; IET; Procurement
Adopt commercial AI tools where appropriate	IET; Procurement; Information Security
<i>OBJECTIVE 3: Pilot communication/productivity tools</i>	
Activity	Collaborating Departments
Pilot productivity AI tools	IET; Pilot departments; Security & Privacy
Collect feedback and measure productivity impact	IET; Project team; Survey teams
Coordinate safe deployment of AI tools	Information Security; Privacy Officer
GOAL 3: Develop a Campus AI Platform for Institution-Specific Use Cases	Encourage adoption of AggieAI tools, including Rocky and Gunrock, for administrative service delivery and operational efficiency, continuing to evaluate build-versus-buy approaches while ensuring staff have access to a secure, compliant, institutionally-supported AI environment for piloting and scaling beneficial applications.
Primary Unit Responsible: IET	
<i>OBJECTIVE 1: Evolve AggieAI architecture</i>	
Activity	Collaborating Departments
Expand AggieAI platform capabilities	IET; cross functional team
Ensure compliance with data governance standards	IET, AI Council, Privacy Officer
Monitor platform performance and support needs	IET

OBJECTIVE 2: Enable experimentation and innovation		
Activity	Collaborating Departments	
Launch AI sandbox environments	IET; AI Council	
Support low-risk AI experimentation	Senior leadership	
Share AI pilot learnings across campus	Strategic Communications	
Develop data readiness framework	AI Council, IET, BIA	
OBJECTIVE 3: Embed AI into core systems		
Activity	Collaborating Departments	
Identify systems for AI integration	IET; System owners	
Design AI augmentation use cases	IET; Functional stakeholders	
Implement AI integrations with systems	Developers; IET; Vendors	
Ensure privacy-preserving AI implementations	Information Security; Privacy Officer; IET
